684	Deflector Wide Angle Flat Fan Tip	217
686	Deflector Wide Angle Flat Fan Tip	218
686	Air or Steam Deflector	277
688/689	Impactor Flat Fan	220

WHERE TRADITION MEETS THE FUTURE

1879

Company founded by Paul Lechler

1893

Patent for liquid atomization

1967

Relocation of production to Metzingen

1978

Expansion to the USA and then to other countries

1995

Production, sales and administration are concentrated in Metzingen

140

1879 - 2019

2010

Expansion of production with a new 13.000 m² Manufacturing Plant

2016

New Development and Technology Center is opened in Metzingen

2019

Celebrating 140 years

2021

New factory in China

2022

New logistics center in Metzingen

THERE ARE MANY REASONS TO CHOOSE NOZZLES FROM LECHLER

The first choice for your nozzle solution

You only become a market leader and Europe's number one in nozzle technology when you can offer your customers a variety of engineered spray solutions. Lechler embodies our relationships with customers on every level.

Unrivalled product diversity

Boasting over 45,000 different nozzles and nozzle systems, Lechler is able to solve the challenges of virtually every process in every industry. If there is not a product for you in our portfolio, Lechler will develop solutions working with our customers and their requirements.

Over 140 years of experience

Lechler has been atomizing liquids since 1879. Today, we understand spray technology better than anyone else. With this experience, we not only develop the perfect nozzle for each application, but also offer expert advice on optimising spraying processes.

State of the Art Manufacturing

Whether you are looking for state-of-the-art metal processing, precision injection moulding, metal injection molding (MIM), ceramic sintering or 3D printing: We have the experience and knowledge to offer all manufacturing techniques.

Measurement Technology Center

In our globally incomparable development and technology center, we analyze the spray behavior of our nozzles. Equipped with cutting-edge test rigs, highly developed nozzle measurement technology and state of the art infrastructure, Lechler's research and development center offers various opportunities that serve all of our customers needs; from practical testing, droplet analysis, measurement technology, and more.

Highly qualified employees

Employee management at Lechler is characterized by the promotion of continuous development and team spirit in the workplace. This is the secret recipe behind our companies success and true passion and commitment of our people throughout the organization.

Creating Solutions

The needs and requirements of our customers are at the forefront of everything we do. Our goal is to always offer the ideal solution for every task, and if it is not yet available, we develop it.

Long Lasting Customer Relationships

Longevity and quality is the foundation to which our business is built upon. We thrive on mutual trust and attach great importance to excelling through performance, know-how and long-term partnerships.

DIVERSITY IN TOP FORM

Lechler's services go far beyond the development and production of nozzles. Thanks to an extensive portfolio of products and services, we are able to ensure optimum spraying results in a wide range of industries and applications.

MEASURING TECHNOLOGY

At Lechler, high-precision spray measurements and analysis are not only used for nozzle developments, they are also offered as a service.

For detailed information about
our range of services, please visit:
www.lechlerusa.com

NOZZLES

In addition to the nozzles presented in this catalogue, our portfolio also includes numerous special nozzles – for applications in many other industries, from agriculture to steel production.

CFD

Computational Fluid Dynamics (CFD) not only enables us to develop nozzles quickly and precisely, it also ensures customer-specific process optimization.

ENGINEERING

Our experienced engineering team strives to provide you with a system solution tailored to your application and installation-specific conditions.

DROPLET SEPARATORS

Our droplet separators play a key role in process optimizations. They are primarily designed to separate liquids from gas flows and are currently used in over 100 different applications worldwide.

LANCES AND CUSTOM SOLUTIONS

With custom nozzle lances, spray headers and spray systems, we ensure the implementation of customized solutions for your specific application.

➤➤ FOUR BUSINESS DIVISIONS DIVERSITY AT ITS FINEST

There's more to spraying than meets the eye. Various industries have their own focus and requirements. To meet all of them, we develop and sell industry-oriented solutions in four individual business sectors.

Our diversity and experience spanning over 140 years gives us a wealth of knowledge that is shared to guarantee the best engineered spray solution across all industries.

GENERAL INDUSTRY

Food and Beverage Industry, Pharmaceutical Industry, Chemical Industry, Automotive Industry, just to name a few. Lechler Nozzles can be found in almost every production environment. With a deep understanding of customer processes, we ensure an optimized engineered spray solution for every application.

AGRICULTURE

From plant protection and liquid fertilization to irrigation – Lechler offers the ideal nozzles for precise application, thereby achieving the best results with minimal effort in the shortest possible time. This helps to increase yields and protect the environment.

METALLURGY

Steel and aluminium producers face immense competitive pressure worldwide. The required product qualities can only be produced with maximum energy efficiency through optimization of your process.

Lechler nozzles make a decisive contribution to producing innovative material grades and reducing CO₂ emissions.

AIR QUALITY CONTROL SYSTEMS

Increasingly stringent emission requirements but also a growing number of voluntary commitments mean air quality control systems are in the spotlight more than ever. With its wide range of nozzles and efficient gas treatment systems, Lechler offers the perfect answer for every application.

»» AT HOME IN MANY INDUSTRY SECTORS

We understand your processes and engineer every solution to match each nozzle to the respective environmental conditions. Our specialists will help you choose the right nozzle and aid in engineering services to meet your application needs.

➤➤ A BRIEF INTRODUCTION
TO MORE THAN
45,000 PRODUCTS

QUESTION OF SHAPE: THE IDEAL SPRAY PATTERN FOR YOUR APPLICATION

Form follows function – and vice-versa. The search for the right nozzle begins with the choice of atomization type (single fluid nozzle or pneumatic atomizing nozzle) and the appropriate spray pattern. This determines the essential properties of the nozzle.

Single fluid nozzle

By narrowing the cross section in the nozzle, the flow velocity of the fluid being atomized increases. Potential energy is converted into kinetic energy (speed). The fluid exiting the nozzle orifice disburse the liquid into droplets of various sizes and distribution.

Solid stream nozzles

Flat fan nozzles

Defined spray, linear impact. A wide range of nozzles with various flow rates, spray angles and materials.

Main applications:

- Cleaning
- Coating
- Humidification

Hollow cone nozzles

Ring-shaped impact, various flow rates and fine atomization. Available in two designs (axial and tangential).

Main applications:

- Cooling
- Humidification
- Chemical engineering

Full cone nozzles

A wide range of nozzles with full surface impact. Available in two designs (axial and tangential).

Main applications:

- Cleaning
- Surface spraying
- Chemical engineering

Pneumatic atomizing nozzles

With pneumatic atomization, the various flow velocities of gases and liquids in a nozzle result in the desired shearing of the liquid into extremely fine droplets.

Finest atomization even of viscous fluids. Full cone or flat fan versions are available.

Main applications:

- Cooling
- Humidification
- Chemical engineering

Compressed air nozzles

Compressed air nozzles are used for dispersing air or saturated steam in a concentrated fan. Generally, they are flat fan, solid stream or round jet nozzles. Our multi-channel compressed air nozzles are extremely quiet and also economical in terms of air consumption.

High blowing force with maximum efficiency and reduced noise level.

Main applications:

- Blowing off and out
- Cooling
- Drying

Tank cleaning nozzles

For years now, our tank cleaning nozzles have been making a name for themselves as both an economical and highly effective solution for tank and equipment cleaning. The portfolio is divided into static spray balls and rotating cleaning nozzles.

Static nozzles

Extremely robust version for easy rinsing even at high temperatures.

Rotating nozzles

High cleaning performance in the low pressure range for any amount of soiling. Enables cleaning in place and saves on expensive cleaning chemicals.

OVERVIEW OF KEY NOZZLE PARAMETERS

FLOW RATE

TEMPERATURE

LIQUID

PRESSURE

In addition to the spray pattern, each nozzle has specific properties, which in turn depend on various – mutually influencing – operating parameters. An overview of the key factors can be found in the planning aids section starting on Page 27.

IMPACT

SPRAY ANGLE

DROPLET SIZE

LIQUID DISTRIBUTION

OUR PRODUCT NUMBERS: EVERYTHING YOU NEED TO KNOW IN TEN CHARACTERS

Each Lechler product number not only serves as an order number, it also describes all the essential properties of the associated nozzle.

Product number

632.301.16.BA

A SPRAY PATTERN

B NOZZLE TYPE/SERIES

C FLOW RATE

The flow rate depends on the respective nozzle type. The exact specifications are shown in the tables on the product pages. The values refer to the measurement with water.

D SPRAY ANGLE

Flat fan: 1 = 20°, 2 = 30°, 3 = 45°, 4 = 60°, 5 = 75°, 6 = 90°, 7 = 120°
Hollow and full cone: 3 = 45°, 4 = 60°, 5 = 70/80°, 6 = 90°, 8 = 120°/130°, 9 = 180°
Solid stream: 0 = 0°

E MATERIAL

11 = Stainless Steel 430F, 1Y = Stainless Steel 316L, 16 = Stainless Steel 303, 17 = Stainless Steel 316/316Ti, 30 = Brass, 5E = PVDF, 51 = PA, 53 = PP, 55 = PTFE, 56 = POM, 42 = aluminum.

For individual series, the material may deviate from this numbering system. Refer to the respective product page for details. Special material available on request.

* All the nozzles are designed for a specific reference pressure. This pressure is highlighted in bold in the tables on the product pages. The flow rate specifications at the reference pressure are measured values. The flow rate specifications for a deviating pressure level are calculated values.

Ordering examples

- You are looking for a flat fan nozzle with a 20° spray angle and an approx. 0.9 gal/min flow rate at 30 psi. It should be made of stainless steel 303 and come with a 1/8" male thread.

Type	+	Material no.	+	Code	=	Ordering no.
632.301	+	16	+	BA	=	632.301.16.BA

- You are looking for a flat fan nozzle with a 30° spray angle and an approx. 0.21 gal/min flow rate at 45 psi. It should be made of brass and come with a 1/4" male threaded connection.

Type	+	Material no.	+	Code	=	Ordering no.
632.362	+	30	+	BC	=	632.362.30.BC

Information on dimensions

- All dimensions in technical drawings and tables are in inches (unless stated otherwise).
- Thread sizes BSPP and NPT are given in inches.

Product images

The images on the product pages are provided as examples and may deviate in individual cases depending on the actual nozzle size.

▶▶ PLANNING AIDS

»» PLANNING AIDS YOU CAN COUNT ON OUR SUPPORT

To achieve the optimum spray pattern for your application, numerous influencing factors must be taken into account. The following provides an overview of the key parameters. Needless to say, we will be more than happy to help you find the ideal nozzle.

- Flow rate
- Droplet size
- Spray angle
- Viscosity
- Impact
- Nozzle arrangement
- Determination of the pipe diameter
- Conversion tables
- Lechler online services
- Certificates and declarations

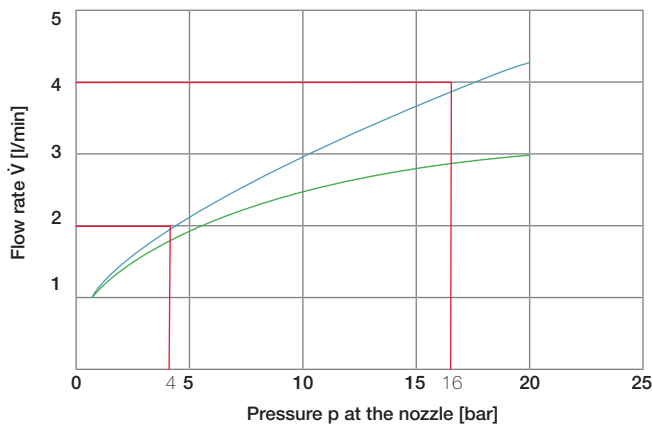

Flow rate via pressure

With single element nozzles, the flow rate is controlled exclusively via the connection pressure.
The following correlation applies:

	Axial-flow full cone nozzles	All other single element nozzles
Calculation of the flow rate \dot{V} [l/min] at a given pressure p [bar]	$\dot{V}_2 = \left(\frac{p_2}{p_1}\right)^{0,4} \cdot \dot{V}_1$	$\dot{V}_2 = \sqrt{\frac{p_2}{p_1}} \cdot \dot{V}_1$
Calculation of the pressure p [bar] at a given flow rate \dot{V} [l/min]	$p_2 = \left(\frac{\dot{V}_2}{\dot{V}_1}\right)^{2,5} \cdot p_1$	$p_2 = \left(\frac{\dot{V}_2}{\dot{V}_1}\right)^2 \cdot p_1$

Flow rate via pressure

Pressure-flow rate chart for two single element nozzles

- Flow rate axial-flow full cone nozzle
- Flow rate of all other single element nozzles

All pressure values refer to the difference Delta p between the connection pressure and the ambient pressure.

$$\Delta p = p_1 - p_2$$

To double the flow rate, four times the connection pressure is, thus, required for all single element nozzles, except for axial-flow full cone nozzles.

Flow rate as a function of the medium density

For media with a lower density than water, the volume rate increases.

$\dot{V}_w = \frac{\dot{V}_{F1}}{X}$	\dot{V}_w = flow rate of water [l/min, l/h]
$\dot{V}_{F1} = \dot{V}_w \sqrt{\frac{\rho_w}{\rho_{F1}}} = \dot{V}_w \cdot X$	\dot{V}_{F1} = flow rate of the liquid whose density deviates from 1,000 [kg/m ³]
$X = \sqrt{\frac{\rho_w}{\rho_{F1}}}$	X = multiplier ρ = density [kg/m ³]
P_{F1}	500 600 700 800 900 1,000 1,100 1,200 1,300 1,400 1,500 1,600 1,700 1,800 1,900 2,000

PLANNING AIDS

DROPLET SIZE

Each nozzle produces a spray of differently sized droplets (poly-disperse spray). For many applications (e.g. evaporative cooling, absorption processes), the size of the total surface area of all the droplets is crucial. The Sauter mean diameter (D_{32}) was defined for this reason.

If you transform the total volume of the droplets of a spray into droplets of equal size, which in sum would have the identical volume/surface ratio as the actual spray, these droplets would have the Sauter mean diameter.

Monodisperse spray (Quite rare in reality)

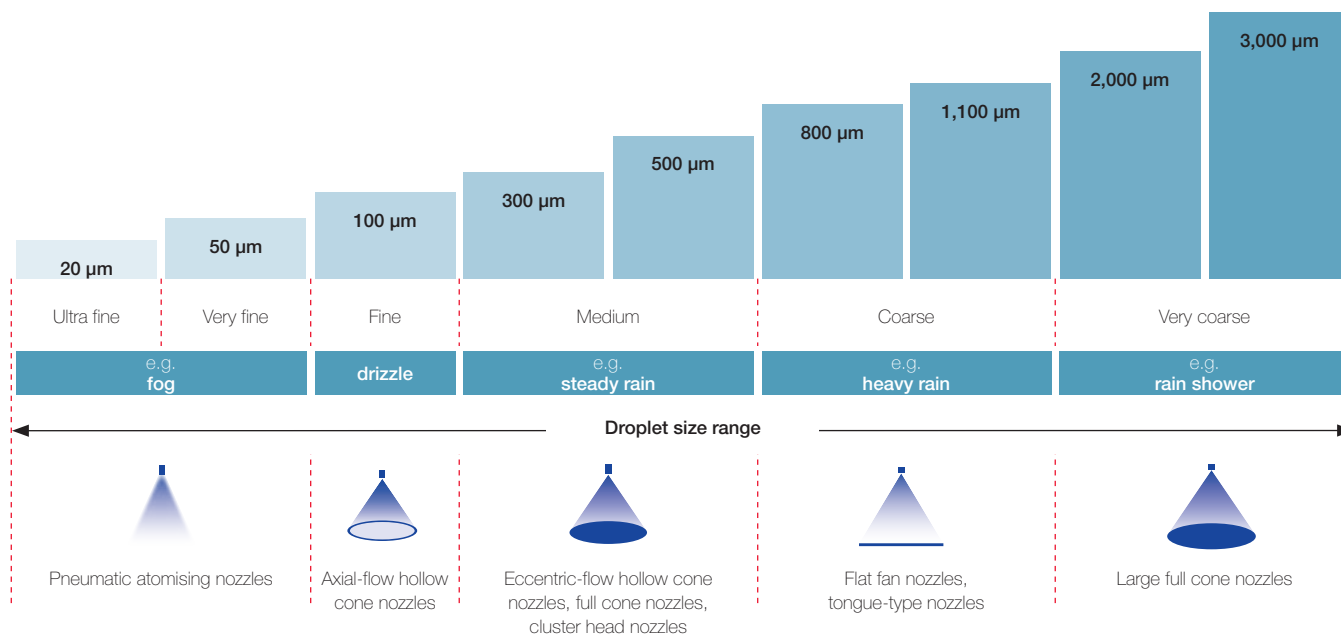

Typical droplet distribution of the spray of a single element nozzle

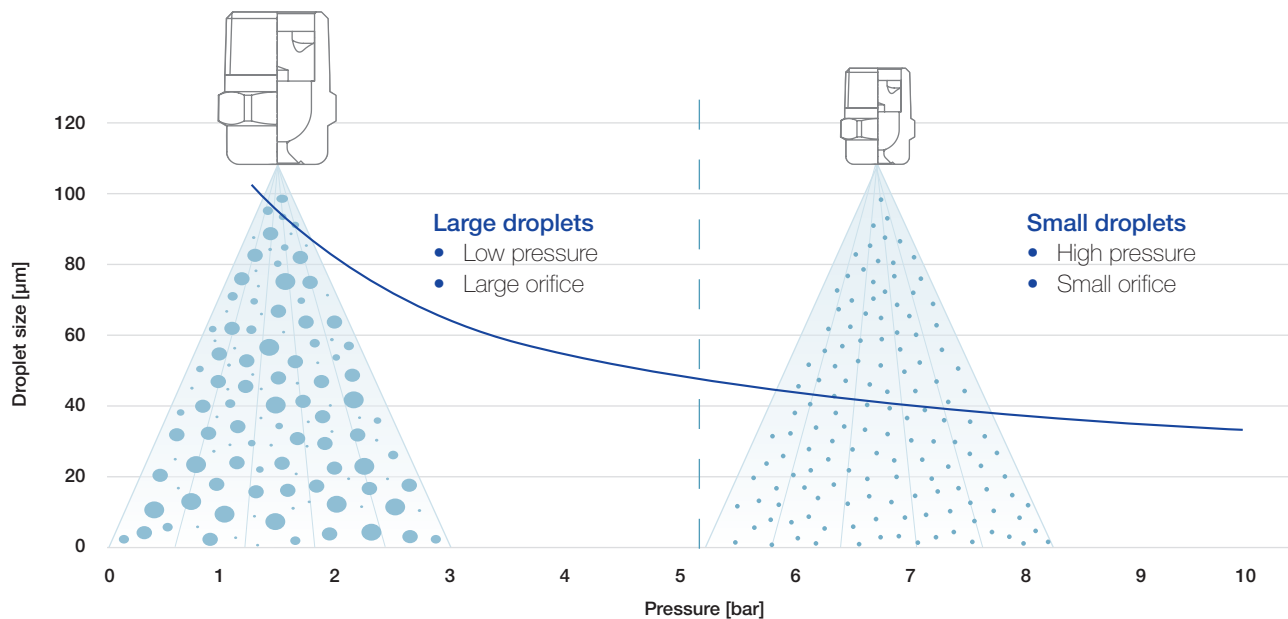

The sprays have varying droplet sizes. However, the ratio of surface area to volume is the same for both and thus also their Sauter mean diameter.

Rough classification of droplet sizes

Droplet diameter as a function of the operating pressure

Influences on the droplet size

The following applies in general to all single element nozzles:

- The higher the **operating pressure**, the finer the droplets.
- The smaller the **nozzle outlet bore**, the finer the droplets.
- The higher the **viscosity** of the medium being atomised, the larger the droplets.

Cone and flat fan nozzles are available with varying spray angles. The spray angle can significantly influence the result of the process and should, therefore, be chosen carefully. The angles specified in the tables apply to operation with water at the respective design pressure. In case of deviating operating conditions, the angle may deviate from this value.

Influences on the spray angle

The following factors influence the size of the spray angle:

- **Pressure**

The operating pressure has a significant influence on the spray angle. At very low or very high pressure levels, the spray angle is smaller than at the optimum operating pressure.

- **Distance**

At small distances, the spray width initially increases with the distance and can be determined easily using the trigonometric function. Straight-line pattern can be assumed. With greater spraying heights, the trajectory points increasingly downwards, thus reducing the effective spray angle.

- **Viscosity**

The higher the viscosity of the liquid being sprayed, the smaller the spray angle. The viscosity of liquids can usually be reduced by heating them up.

Change in the spray pressure

Height of the nozzle position

The viscosity of a liquid has a significant influence on the spray behavior of the nozzle. When selecting the right nozzle, the viscosity must, therefore, be taken into account.

Single element nozzle

Example: Hollow cone, full cone, flat fan nozzles

Pneumatic atomizing nozzles (internal mixing)

Example: Series 136.1, 136.2, 136.4, 136.5, 166.1, 166.2, 166.4, 140

Pneumatic atomizing nozzles (external mixing)

Example: Series 136.13, 136.6, 166.6, 176

- No influence on the spray pattern
- Influence on the spray pattern
- Significant influence on the spray pattern

Medium	Temperature [°C]	Viscosity [mPa-s]
Water	20	1
Milk	20	2
Olive oil	20	108
Olive oil	60	20
Sugar solution 65° Bx	20	120
Sugar solution 70° Bx	20	400
Gelatine	45	1,200

Impact is the pressure in N/mm² that the spray jet generates as it strikes the surface. This is crucial for the majority of cleaning tasks. The greater the impact, the better the cleaning result. Lechler high pressure nozzles are characterized by a uniformly high impact across the entire spray width.

$$I = \frac{\text{Impact force}}{\text{Impact surface}} = \frac{F}{A} \text{ [N/mm}^2\text{]}$$

Influences on the impact

The following factors influence the size of the impact:

- **Impact surface and jet shape**

The impact surface is the area where the spray jet strikes. The smaller the impact surface, the greater the impact. The highest impact values can be achieved with solid stream nozzles and flat fan nozzles with a small spray angle.

Comparison of the cleaning result of three nozzles at an identical pressure level and flow rate.

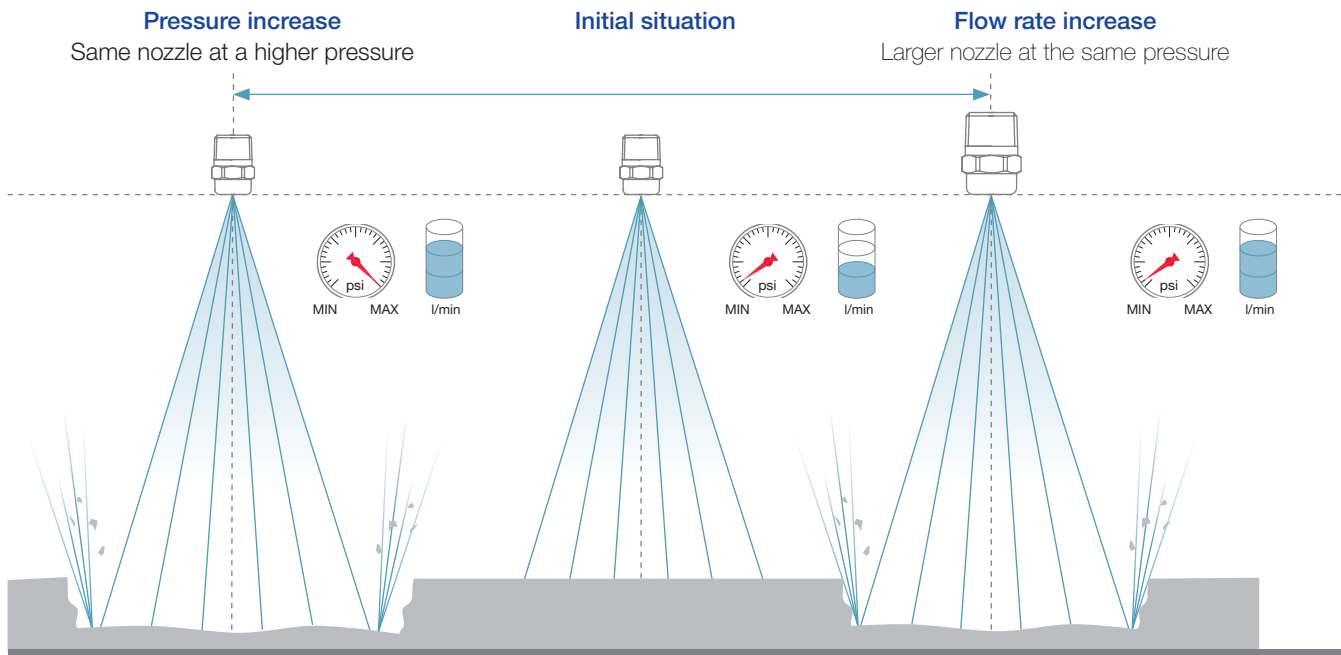

- **Pressure**

An increase in the connection pressure leads to an increase in the impact.

- **Flow rate**

An increase in the flow rate by using a larger nozzle leads to a higher impact with otherwise unchanged parameters (spray angle, pressure and medium).

Comparison of the cleaning result of three nozzles with an increase in the pressure level and flow rate.

PLANNING AIDS

NOZZLE ARRANGEMENT

Arrangement of flat fan nozzles with parabolic liquid distribution

Lechler flat fan nozzles ensure consistent, uniform coverage over the impact surface. For this purpose, the spray widths B should overlap by approx. $1/3$ to $1/4$. To stop the sprays interfering with each other, the nozzles should be aligned at an angle of approx. $5-15^\circ$ to the longitudinal axis of the pipe.

Arrangement of tongue-type nozzles

To achieve uniform impact surface coverage, the tongue-type nozzles must be arranged in such a way that the spray widths B overlap by $1/3$ to $1/4$. Therefore, the nozzles should be inclined at an angle of 15° to the vertical of the longitudinal axis of the pipe (either with a nipple welded on at an angle or a Lechler ball joint) to prevent interference of the spray.

Arrangement of full cone nozzles and hollow cone nozzles

With full cone and hollow cone nozzles, the size of the nozzles distance E must ensure that the circular impact surfaces overlap by approx. $1/3$ to $1/4$.

E = nozzle distance H = nozzle installation height B = spray width α = spray angle \ddot{U} = overlapping of the spray angle D = spray diameter

Square and offset arrangement of full cone nozzles and hollow cone nozzles

Square arrangement

$$\text{Nozzle distance: } E = \frac{D}{\sqrt{2}}$$

$$\text{Overlapping: } \ddot{U} = D - E$$

In addition to these arrangement suggestions, please note the information on the spray angle on page 260 and request a detailed spray width diagram, if required.

Offset arrangement

$$\text{Nozzle distance: } E_1 = \frac{D}{2} \cdot \sqrt{3}$$

$$\text{Nozzle distance: } E_2 = \frac{3}{4} \cdot D$$

$$\text{Overlapping: } \ddot{U} = D - E_1$$

PLANNING AIDS

DETERMINATION OF THE PIPE DIAMETER

The flow rate data in the diagram refers to gases and steam in operating condition.

Example

You want to atomize 100 liters of water a minute. The viscosity of water is $\nu \approx 1 \cdot 10^{-6} \text{ m}^2/\text{s}$. In the diagram above, look for the intersection of the corresponding viscosity curve and the flow rate lines. Using the coordinates of this point, you can discover the correct inner pipe diameter or pipe size and the most efficient speed.

All the flow rate data in this catalog is based on measurements with water and takes into account the individual flow parameters of the various nozzle designs.

p pressure

Unit	Conversion			
	bar	Pa = N/m ²	psi	lb/sq ft.
1 bar	1	100,000	14.5	2,089
1 Pa	$1 \cdot 10^{-5}$	1	$14.5 \cdot 10^{-6}$	0.0209
1 psi	0.06895	6,895	1	144
1lb/sq ft.	$0.479 \cdot 10^{-3}$	47.9	$6.94 \cdot 10^{-3}$	1

V volume

Unit	Conversion			
	l	m ³	Imp. gal	US gal
1 l (1 dm ³)	1	$1 \cdot 10^{-3}$	0.22	0.264
1 m ³	1,000	1	220	264.2
1 Imp. gal	4,546	$4,546 \cdot 10^{-3}$	1	1,201
1 US gal	3,785	$3,785 \cdot 10^{-3}$	0.8327	1

V̇ flow rate

Unit	Conversion				
	l/s	l/min	m ³ /h	Imp. gal	US gal
1 l/s	1	60	3.6	15.85	13.2
1 l/min	0.0167	1	0.06	0.2642	0.22
1 m ³ /h	0.2778	16.67	1	4.4	3.66
1 Imp. gal/min	0.0631	3.785	0.227	1	0.8327
1 US gal/min	0.076	4.546	0.273	1.201	1

Determination of the external thread diameter

Nominal size of thread ["] for ISO 228 and EN 10226	1/8	1/4	3/8	1/2	3/4	1

ISO 228 threads are cylindrical and usually require a separate flat gasket or R-ring for sealing.
EN 10226 threads are conical and can be sealed with sealing tape, etc.

You can find all the latest information about Lechler, our products and services at any time at www.lechlerusa.com.

3D design data

With the free 3D design data of Lechler nozzles and accessories, we support your design needs at every step.

After registering free of charge, you can download the required data packs in all common CAD formats at <http://lechler.partcommunity.com>.

- Time-saving, direct download of construction drawings and technical data
- Simple product selection similar to the Lechler print catalogue
- Preview function with product photo and 3D graphics
- Available in all common 3D file formats

Always at hand – the Lechler industry app

The Lechler industry app provides all important calculation and conversion programs combined in one interface:

- Unit calculator for pressure, volume and flow rate
- Pressure/Flow rate calculator for single element nozzles, including axial-flow full cone nozzles
- Determination of the pipe diameter

iOS (Apple)

Android (Google)

Available free of charge in the Apple App Store and the Google Play Store.

» PLANNING AIDS CERTIFICATES AND DECLARATIONS

We can issue various certificates and attestations for our products. Whether the desired document can be issued for a specific product must be checked in advance. We will be more than happy to inform you of the conditions for the documents upon request.

Declaration of Compliance EN 10204 - 2.1

This declaration of compliance confirms that the products supplied have been manufactured and tested in accordance with the relevant specifications.

Test Report EN 10204 - 2.2

The test report can be issued either with regard to the material (including the non-specific material certificate of the supplier) or with regard to the spray parameters (spray angle and flow rate, without an additional document).

Inspection Certificate EN 10204 - 3.1

The inspection certificate is usually issued with regard to the material. In this case, the parts are manufactured order-related with re-stamping.

However, a specific certificate can also be issued with regard to the flow rate, spray angle, dimensions of nozzles, etc.

FDA Declaration of Conformity

Confirmation that the material used complies with FDA regulations.

Declaration of Conformity to regulation (EC) no. 1935/2004 and (EC) no. 10/2011

Confirmation that the product supplied is suitable for use with foodstuffs and that the material complies with the stated regulations.

Supplier's Declaration

Certificate issued by Lechler confirming that the products have been wholly produced or originate in the European Union. A supplier's declaration can be issued in relation to a specific order (individual supplier's declaration) or as a long-term supplier's declaration that remains valid for two years.

Certificate of Origin

Official confirmation of the origin of a product, certified by the Chamber of Commerce and Industry.

LECHLER**

ENGINEERING AND
FABRICATION

THE HIGHEST STANDARDS IN SPRAY TECHNOLOGY

We keep the highest standards when it comes to designing and engineering spray solutions for our customers. It is important to know what our customers' expectations and requirements are before we even start the design. Lechler uses 4D methodology and in this, our engineers will Define, Design, Develop, and Deliver the optimal spray solution. We work closely with you from start to finish which is one of the many reasons why Lechler is a leader in spray technology.

1. Define

The initial step of our approach begins with evaluating your current process so that our engineers understand your requirements and expectations.

2. Design

All projects are different but our engineers make sure that the necessary software is used along with precise calculations and measurements:

- Proprietary software for layout
- Calculations (flow rates, pressures and nozzle placement, pipe sizing, thermal expansion, and preliminary pump and component selection)
- Computational Fluid Dynamics (CFD) when required
- Finite Element Analysis (FEA), fatigue analysis on high pressure
- Approval drawings
- Detailed drawings

3. Develop

Lechler has testing laboratories, state-of-the-art production facilities, and certifications to develop your ideal solution. There is no need to go outside when we already have all the resources right here.

Production

- Machining (milling, lathing)
- Injection molding (MIM technology)
- Welding & fabrication
- Assembly
- Refurbishment

Testing

- Hydro testing
- Positive material identification
- Nondestructive examination
- Material test reports

Certifications

- ASME - Section IX (Qualified welder performance)
- ASME B & PV Code (Boiler & pressure vessel)
- ASME B31.1 & B31.3 (Power & piping process)
- ANSI & ASTM

4. Deliver

Our ultimate goal is delivering a robust quality solution that meets all of your expectations:

- Quality
- Design
- Price
- Delivery
- And more...

THE INTELLIGENT WAY TO OPTIMALLY USE NOZZLES

When considering flows, turbulence and highly complex spray processes, nobody knows the possibilities better than we do. Just as no one knows your requirements better than you. Together we can find out how to use all your potential.

For simple calculations such as a straight piece of pipe, the flow state is still relatively easy to calculate using paper, pencil, and calculator.

If there is just a slight curve, then this is not so easy. Here, **Computational Fluid Dynamics (CFD)** is required.

Your benefits

- Identifying targeted areas
- Improving nozzle design
- Optimizing in a tight space
- Customer specific process optimization
- Reliable flow conditions
- Precise calculations
- Preventative measures
- And more...

CUSTOM FABRICATION SPRAY SYSTEM SOLUTIONS

Headers, lances, and quills

When it comes to spray system mechanisms, there are hundreds of pieces to consider. From the materials that make the mechanism, to the particular nozzles used to disperse the fluid – there are plenty of opportunities for customization.

While finding the right nozzle for your application is important, it is equally important that the equipment supplying fluid to the nozzle is designed properly to achieve the desired results for a safe and cost-effective installation. Whether your process requires fine atomization, coarse droplets, even coverage, high impact, low impact, or another characteristic, we are happy to guide you with our knowledge in fluid flow simulation, calculations, equipment selection, sizing, and fabrication.

Lechler engineers and welders are highly skilled in the design and fabrication of products such as ASME B31.1 and ASME B31.3. Our facility and welders maintain a comprehensive portfolio of certifications per ASME Code Section IX. Finally, our first class project management, material sourcing, and in-house state-of-the-art PMI equipment, amongst other NDE processes, ensure a successful project with all the required quality measures and documentation.

PUMP AND CONTROL SKIDS REGULATE WATER FLOW

Our pump and control skids for regulating the flow rates of water and atomizing air are individual customer-specific solutions. Based on the requirements in each case, our first step is to design an overall concept and select the best components in order to create a perfectly tailored solution.

First-class engineering

To perform our engineering, we determine all relevant parameters and define the plant's design. This includes determining the nominal widths and pressure levels as well as designing the pumps and control valves. We draw up the P&I diagram and make detailed equipment and signal lists as an option. Of course, the project is fully documented to ensure that technology and processes can be quickly traced even after years of use.

High-quality components

A precise knowledge of the characteristic properties of our nozzles is essential. For only a complete system that is coordinated to how the nozzles function and operate will ensure smooth and economical operation of the gas cooling system. We fit our pump and control skids with high-quality components from well-known manufacturers as standard and the most important functional components are even realized in redundant design.

Tested quality

The design (e.g. dimensioning of nominal widths) and production are in line with the latest state of the art and comply with all relevant standards. They are equally subject to the Lechler quality management system certified to DIN EN ISO 9001:2015, as is the final acceptance. Before delivery, the pump and control skid undergoes a pressure and tightness test and is checked by our experienced engineers. This will avoid any problems during commissioning.

Control concept

Numerous installations, years of commissioning experience, plus expertise in nozzle technology all contribute to the constant improvement and optimization of Lechler control systems. By installing a control solution from Lechler you will benefit considerably from this wealth of experience. The flexible and fully automatic concept can be perfectly adapted to your process.

Junction Box

All components except the pump motors are wired to a junction box within the pump and control skid unit.

This assures that the customer has a central connection point for all electrical components and measuring devices for further processing in the higher-level control.

Control cabinet with complete PLC

All components including the pumps are wired to a control cabinet. The control cabinet is integrated into the base frame of the pump and control skid unit.

The complete injection control is tested in accordance with valid electrical standards and regulations and allows all relevant process parameters to be visualized over a control panel on the control cabinet.

Specific configuration and extensive testing make commissioning much faster. Communication and the exchange of signals (setpoint, plant status, error messages) with the customer's logic system is carried out via PROFIBUS or PROFINET.

The control has several modes of operation such as automatic mode and manual mode for tests during plant downtimes. In the event of faults, our engineers can quickly perform a remote diagnoses via the installed modem without the need for an on-site visit.

MIST ELIMINATOR SYSTEMS OVERVIEW

Lechler offers a large selection of different separation profiles that can also be combined with each other. This gives us the opportunity to find the optimal solution for your task. We will find the right mist eliminator system for your requirements in terms of efficiency and space.

»» TANK CLEANING NOZZLES

TANK CLEANING NOZZLES

GENERAL INFORMATION

Static

Static spray balls do not rotate and therefore require considerably more liquid for cleaning processes. They are used primarily for rinsing tanks. Spray balls are a very robust and cost effective solution used in many processes.

Free-spinning

Free spinning devices utilize spray orifices that are engineered in a specific position to allow the fluid to drive/rotate the spray head. The repeated impacts of the spray remove the soil and rinse it from the tank surface. This results in optimum cleaning efficiency at low pressures in small to medium-sized tanks.

Controlled rotation

The rotating head is driven by the fluid. A turbine wheel with an internal gear is used to control the rotation. This ensures that the speed remains in the optimum range even at higher pressures. The generated droplets are larger and impact the tank wall at higher speed. These rotating cleaning nozzles achieve higher impact which is especially important for large tanks.

Gear-controlled

The cleaning fluid drives an internal gear by means of a turbine wheel so that the spray head rotates around two axes. The solid jet nozzles mounted on the spray head produce powerful solid stream like jets. These solid jets sweep the entire tank surface in a pre-programmed, model-specific, pattern during a spray cycle. This requires a certain minimum time. These models generate the highest impact and are ideal for very large tanks and the toughest cleaning tasks.

Materials

Lechler tank cleaning nozzles are made of high quality materials such as Stainless steel 316L, PVDF, PEEK or PTFE. In addition to the requirements for material resistance and wear, the materials must also be food grade for use in the beverage, food and pharmaceutical industries.

A large number of the materials used for Lechler tank cleaning nozzles comply with the requirements of the FDA or conform to regulation (EC) 1935/2004.

Hygienic requirements

All Lechler precision nozzles for tank cleaning are designed to meet hygiene requirements. In addition, Lechler also offers special nozzles for particularly stringent hygienic applications, certified to 3-A.

ATEX

Lechler offers several nozzle series designed especially for use in explosive atmospheres.

The respective logo on the product pages indicates which requirements are met.

Good to know

Detailed information can be found in our brochure "Tank and Equipment Cleaning" as well as at <https://www.lechlerusa.com/en/products/product-by-type/tank-and-equipment-cleaning-products>.

Cleaning efficiency classes 1 to 5

Cleaning efficiency classes

Lechler precision nozzles for tank and equipment cleaning are divided into five different cleaning efficiency classes. This is intended to help users find the right nozzle for the respective application quickly.

Every tank cleaning nozzle from Lechler is assigned to a class. The respective class is suitable for specific cleaning tasks.

Dependant upon the application, several cleaning classes can be suitable to the task of removing soils from your application. Generally, it is not possible to quantify and/or differentiate between soil types. The information should be seen as guide intended to make it easier in the selection to finding the right nozzle.

The first step is to find a cleaning efficiency class suitable for the task. If your application is to clean a non-adhering powder material

from a tank surface the cleaning task can be defined as "rinsing". The nozzle series in cleaning efficiency class 1, e.g. static spray ball, or class 2, e.g. MicroWhirly or MiniSpinner, would be suitable for rinsing/washing cycle.

Taking into account the maximum possible tank diameter and the flow rate range, the tables on the following pages can be used to quickly narrow down the suitable nozzles. If the focus is on a low purchase price in the above referenced example, a spray ball should be chosen. If you want to save on your cost-intensive cleaning media, the MicroWhirly or MiniSpinner would be recommended.

If there is no recommended series for the tank diameter, several nozzles can be positioned in the tank to ensure that the distance between nozzle and tank is within the required dimensions.

Simulation software

Various inserts, such as agitators or mixing blades, can cause spray shadowing. To find the ideal nozzle for such complex challenges, we have developed TankClean.

The software simulates the use of various tank cleaning nozzles. The tank shape is freely definable. As a result, subsequent cleaning can be optimized in the planning phase.

»» WHAT TO KEEP IN MIND WHEN PLANNING

① The fundamentals of cleaning technology

Sinner's circle

Cost reduction by efficient cleaning processes

② Mechanical cleaning effects with Lechler rotating cleaning nozzles

Mechanical cleaning

① The fundamentals of cleaning technology

Sinner's circle

The Sinner's circle illustrates the interplay between the four main factors for successful cleaning:

- Chemistry (choice of cleaning agent)
- Mechanical (removal of soil via pressure or friction)
- Temperature (at which cleaning is performed)
- Time (duration of the total cleaning processes)

The proportion of the individual factors as a part of the entire cleaning can be varied, provided that the total is 100 per cent. This results in significant savings potentials.

As a result, the intensification of mechanical cleaning enables

the consumption of cleaning agents or the duration of cleaning to be reduced. Consequently, the mechanical factor takes up a greater part of the Sinner's circle, while the other factors can end up being reduced.

Cost reduction by efficient cleaning processes

This is precisely where our nozzles come into play, having been specially developed for delivering a high mechanical cleaning action. Their greater efficiency helps to permanently reduce on going costs for energy and cleaning agents, and also the duration of cleaning. Consequently a one-off investment in improved nozzle technology pays for itself after only a short time.

Figure 1: Sinner's circle with equal proportions of the temperature, time, chemistry and mechanical factors.

Figure 2: Lechler nozzles and rotating cleaning nozzles have high mechanical cleaning efficiency. This reduces the proportion of the other factors, as well as the resulting costs.

② **Mechanical cleaning effects with Lechler rotating cleaning nozzles**

Mechanical cleaning

Rotating cleaning nozzles deliver the greatest impact when cleaning the surface area of the tank. To achieve this, large droplets must strike at high speed. This enables thick soil to be removed that cannot dissolve in the cleaning fluid. Important influencing factors are the distance between the nozzle and wall, and the operating pressure. If either are too great the fluid

will break down into smaller droplets (see Figs. 3 and 4) and the impact will be reduced.

Besides the impact, the fluid running down the tank wall also has a significant cleaning effect. If the formed film is thick enough, the resulting shear stresses can remove light to moderate soil. In that case, unsprayed patches are less of an issue than is the case during impact cleaning (see Fig. 5).

Figure 5: Cleaning mechanisms, impact and shear stress

Figure 3: Rotating cleaning nozzles with recommended operating pressure

Figure 4: Rotating cleaning nozzles with operating pressure too high

Figure 6: Comparison of rotating cleaning nozzles and static spray balls

»» WHAT TO KEEP IN MIND WHEN PLANNING

Nozzle selection

Choosing the right Lechler rotating cleaning nozzle or static spray ball is determined primarily by the type of soil to be cleaned and the tank diameter. You can find this information on the product pages. It must be guaranteed that the diameter of the tank to be cleaned is smaller than the specified maximum possible tank diameter of the nozzles.

Pump and pipes

The pipe size used depends mainly on the required flow rate and should be chosen so that the pressure losses in the pipe system are as low as possible. It must be guaranteed that the required static operating pressure is available directly at the nozzle. The pump power must be matched to this.

Arrangement

The nozzles must be positioned in the upper part of the tank where possible. The following recommendation applies:

$$H_{\text{nozzle}} = 1/3 \cdot H_{\text{tank}} \text{ and } H_{\text{nozzle}} < 1/3 \cdot D_{\text{max spray diameter nozzle}}$$

In addition, it must be ensured that sufficient cleaning fluid strikes the tank top.

Filling level

If possible, the nozzle should not come into contact with the product during production. The nozzle should be positioned at least 1" above the maximum product level in the tank.

Tank drainage rate

The tank drainage rate is to be selected to prevent the level of liquid from rising during the cleaning process.

Make sure the drain can handle whatever volume you put into the tank. (See chart on the right)

1"	6 gal/min
1 1/2"	13 gal/min
2"	23 gal/min
2 1/2"	35 gal/min
3"	50 gal/min
4"	87 gal/min
5"	141 gal/min
6"	204 gal/min

Number of nozzles

When cleaning large tanks or complex installations, you may need to install several nozzles. The nozzles must be positioned for the spray jets to overlap. These nozzles effectively clean the tank surface area.

Avoidance of spray shadows

Installations such as agitators, baffle plates or pipes prevent the areas behind them from being reached directly by the spray jet. Impact cleaning is not possible in these locations. For this reason, several nozzles must be installed if the tank contains equipment such as agitators or pipes. The number of nozzles should be chosen so that the spray shadows of the individual nozzles are eliminated. In addition, static spray nozzles can also be used for targeted removal of deposits left as a result of spray shadows or in areas that are difficult to clean.

Static spray balls

Series 527

Features:

- Complies with 3-A standards
- Powerful solid jet
- Resistant to high temperatures

Series 527

Slip-on connection
ASME - BPE 1997 (OD-Tube)

	Max. tank diameter [ft]	0	5	10	15	20	25	30

Technical data:

Maximum operating temperature
400 °F

Maximum ambient temperature
400 °F

Installation
Operation in every installation position

Bearing
Static – no bearing

Material
Stainless steel
1.44404 (316L)

Weight
.11–1.43lbs

Surface quality
≤ 0.8 µm
OUTSIDE

Surface quality
≤ 0.8 µm
INSIDE

Steam suitability
Suitable

Insertion diameter
1.3- 4in

Recommended filter
Smaller than the narrowest cross-section

Recommended operating pressure
20 psi

Spray angle	Ordering number	Narrowest free cross section Ø [in]	V̇ water [gal/min]				Dimensions approx. (in)					Max. tank diameter [ft]
	Type		p [psi] (p _{max} = 145 psi)				Height H (in.)	Diameter D (in.)	B	C	A	
			20	40	Liters per min. 2 bar	60						
	527.209.1Y.00.75	0.031	13	19	60	23	2.7	1.3	.75	.13	.50	17
	527.209.1Y.01.50	0.043	37	53	170	65	4.6	2.6	1.51	.19	1.00	20
	527.209.1Y.02.00	0.067	92	130	420	160	6.0	4.0	2.01	.19	1.00	27

The maximum tank diameter applies to the recommended operating pressure and is meant as a recommendation only.
The cleaning result is also affected by the type of soiling.

Slip-on information

- R-clip made of stainless steel AISI 316L is included.
- Depending on diameter of the adapter the flow rate can increase due to leakage between the connection and static spray ball.

Static spray balls

Series 540/541

Features:

- Robust and particularly compact design
- Threaded connection
- Suitable for very high temperatures
- Also suitable for operation with steam and air

Series 540/541

Female thread

Technical data:

Maximum operating temperature
392 °F

Maximum ambient temperature
482 °F

Installation
Operation in every installation position

Bearing
Static – no bearing

Material
Stainless steel
1.4305 (303)

Weight
.20–.22 lbs

Surface quality
≤ 6.3 µm
OUTSIDE

Surface quality
≤ 6.3 µm
INSIDE

Steam suitability
Suitable

Insertion diameter
1.22 in

Recommended filter
Smaller than the narrowest cross-section

Recommended operating pressure
45 psi

Spray angle	Ordering number		Narrowest free cross section Ø [in]	V̇ water [gal/min]						Max. tank diameter [ft]

BSPP thread available on request.

The maximum tank diameter applies to the recommended operating pressure and is meant as a recommendation only. The cleaning result is also affected by the type of soiling.

Static spray balls RinseClean

Series 5B2/5B3

Features:

- No moving parts
- Self-draining
- Proven use in many applications
- Suitable for very high temperatures and hygienic requirements

Series 5B2/5B3

Dimension of the slip-on connection according to DIN 10357, Series B

With the slip-on connection, the spray ball is pushed onto the customer's connection pipe and secured with the supplied Pin.

Pin 1

Pin 2-5

	Max. tank diameter [ft]	0	5	10	15	20	25	30	35	40	45
		(This row is highlighted in red in the original image)									

Technical data:

Maximum operating temperature
392 °F

BSPP thread available on request.

The maximum tank diameter applies to the recommended operating pressure and is meant as a recommendation only.

The cleaning result is also affected by the type of soiling.

Compressed air should be used for dry blowing for a short time only. Operation above the recommended operating pressure has a negative impact on the cleaning result and wear.

Contents of Gyro rebuild kit

The PTFE bearings can be replaced easily to extend the life of the unit. A rebuild kit contains: Bearing sleeves and complete instructions.

Rotating cleaning nozzle XactClean HP2

Series 5S6/5S7

Features:

- Flat fan nozzle with high impact
- Uniform cleaning
- High efficiency due to controlled rotation
- Suitable for use with steam

ATEX version available on request

Series 5S6/5S7

Female thread

Dimensions of 1/2" slip-on connection according to ASME-BPE (OD tube)

Dimensions of 3/4" slip-on connection according to ASME-BPE (OD tube)

Insertion diameter D_1 and interference circle diameter D_2 of the threaded connection

Insertion diameter D_1 and interference circle diameter D_2 of the slip-on connection

Max. tank diameter [ft]	0	5	10	20	25	30
-------------------------	---	---	----	----	----	----

Technical data:

Maximum operating temperature
302 °F

Maximum ambient temperature
302 °F

Installation
Operation in every installation position

Bearing
Double ball bearing

Material
Stainless steel 1.4404 (316L), PEEK, EPDM

Weight
1.43lbs - 1.98lbs

Surface quality Outside
 $R_a \leq 0.8 \mu\text{m}$

Surface quality Inside
 $R_a \leq 1.6 \mu\text{m}$

Steam suitability
Suitable

Insertion diameter
3.19–5.51 in

Recommended filter
Line strainer with a mesh size of 0.3 mm/50 mesh

Recommended operating pressure
45 psi

Adapter
3/8 BSPP, 1/2 BSPP, 3/4 BSPP and 1 BSPP are compatible with HygienicFit

Rotation monitoring
Sensor-compatible, information: see pages 96–97

Maintainable

The maximum tank diameter applies to the recommended operating pressure and is meant as a recommendation only.

The cleaning result is also affected by the type of soiling.

Compressed air should be used for dry blowing for a short time only. Operation above the recommended operating pressure has a negative impact on the cleaning result and wear.

Information about slip-on connections

- Pin made of stainless steel 316L supplied (Ordering no.: 095.013.1Y.06.45).
- Depending on the diameter of the adapter, the flow rate can increase due to a leakage between the adapter and the rotating cleaning nozzle.

Rotating cleaning nozzle XactClean HP+ Series 5S5

Features:

- High impact and uniform cleaning due to specially developed flat fan nozzles
- Effective cleaning of larger tanks due to higher flow rates
- High dependability and operational reliability due to robust drive unit
- Compatible with Lechler rotation monitoring sensor

*Nozzle 490.568.1Y.BA is used in this assembly

Information on operation

- Operation with compressed air purge only for short-term usage. Operation above the recommended operating pressure means higher wear and smaller droplets. This might have adverse effects on the cleaning result.

Extendable cleaning nozzle

PopUp Whirly

Series 5P5

Features:

- Designed for cleaning agitators or other spray shadow areas
- Compact design
- Can be installed flush with the wall

Series 5P5

Technical data:

Maximum operating temperature
203 °F
203 °F (ATEX)

Maximum ambient temperature
302 °F
284 °F (ATEX)

Installation
Operation in every installation position

Bearing
Slide bearing

Material
Stainless steel 1.4404 (316L), stainless steel 1.4571 (316Ti), stainless steel 1.4401 (316), FKM

Weight
.75 lbs

Surface quality
Ra ≤ 0.8 μm on process side, remaining housing Ra ≤ 1.6 μm

Surface quality
Ra ≤ 1.6 μm

Steam suitability
Not suitable

Insertion diameter
1.22 in

Recommended filter
Line strainer with a mesh size of 0.3 mm/50 mesh

Recommended operating pressure
30 psi
Opening pressure: approx. 4 psi, closing pressure: approx. 4 psi

Male thread

Tri-Clamp connection

Installation situation

Male thread

Tri-Clamp connection

Weld-in socket for threaded connection

The thread is hygienically encapsulated with two O-rings (included in the scope of delivery of the PopUp Whirly).

Order no.: 050.020.1Y.AQ.00
Material: Stainless steel 1.4404 (316L)

Weld-in flange for Tri-Clamp connection

A joint clamp in accordance with DIN 32676-A DN50 with a connection diameter of 1.99 in is required for connection of the nozzle at the weld-in flange. A gasket with a thickness of .08 in is required if the flange is used in combination with the PopUp Whirly.

Order no.: 050.020.1Y.01.00
Material: Stainless steel 1.4404 (316L)

Spray angle	Ordering number			Flow Rate (Gallons Per Minute)					Max. tank diameter ft.
	Type	Connection		20 psi	30 psi	Liters per min. 2 bar	40 psi	60 psi	
		G1 1/4A ISO 228	Tri-Clamp						
30°	5P5.081.1Y.00.00.0	AP	00	10.97	13.43	50	15.51	19.00	10

Information on operation

The PopUp Whirly is not suitable for operation with compressed air or another gas. Use above the recommended pressure will have a negative influence on the cleaning result and wear.

*This product is also available in a ATEX version

Rotation monitoring sensor

Features:

Cleaning procedures can be monitored easily and reliably with the Lechler rotation monitoring sensor. The sensor records the quantity of liquid flowing past the sensor tip. With the aid of software¹, the sensor function can be specifically adjusted to the tank size, pressure and nozzle.

Electrical data:

- Supply voltage:
 $U_b = 24\text{ V} \pm 20\%$
 (18 to 32 VDC)
- Power requirements:
 $< 20\text{ mA}$
- Output signal:
 PNP, 50 mA, short circuit protected, active

Operating conditions:

- Ambient temperature:
 $-50\text{ }^\circ\text{F}$ to $+140\text{ }^\circ\text{F}$
- Process temperature:
 $0\text{ }^\circ\text{F}$ to $+212\text{ }^\circ\text{F}$

Materials:

- Socket (1/2 BSPP):
 Stainless steel 316L
- Probe tip: PEEK
- Housing: Stainless steel 303

Operating principle:

- Capacitive

Advantages:

- Reliable recognition of any faults during the cleaning cycle
- The process connection of the sensor is in compliance with the hygiene guidelines of EHEDG
- Simple operation
- Can be connected to a PLC
- Only needs to be set up once using the software provided
- Can be specifically adapted to each cleaning task

Rotation monitoring sensor, incl. weld-in sleeve

Cable set for commissioning

Mains adapter

USB adapter with cable

Programming adapter Y-piece

Weld-in mandrel

Ordering data	Ordering number
Rotation monitoring sensor, incl. weld-in sleeve	050.040.00.00.00
Cable set for commissioning	050.040.00.00.01

Adapter HygienicFit Series 05C

Features:

- Hygienic threaded connection between equipment and nozzle
- Available for many thread sizes
- Weld-on side suitable for common pipe standards
- O-rings ensure a leak-tight connection
- O-rings fully encapsulate the thread

Series 05C

Technical data:

Maximum operating temperature
302 °F

Maximum ambient temperature
302 °F

Installation
Operation in every installation position

Material
Stainless steel 1.4404 (316L), EPDM (O-ring)

Weight
.15 - .66 lb

Surface quality
Ra ≤ 0.8 µm
OUTSIDE

Surface quality
Ra ≤ 0.8 µm
INSIDE

Steam suitability
Suitable

If you find this icon on our product pages, this means that the nozzle is compatible with the HygienicFit adapter.

PERFECT FOR RELIABLE PLANNING

TankClean SIMULATION SOFTWARE

Planning for a perfectly clean tank can be a challenge. Many tanks have built-in equipment such as agitators or baffles which can create spray shadows. Whether a certain nozzle is able to reliably clean all surfaces of the tank under these conditions cannot be decided with certainty on the basis of just a visual inspection.

With our new and unique TankClean software, we can help you to find the optimum solution for perfectly cleaning your tank. To do this, we replicate the tank geometry in the software and then simulate the spraying operation. Operation of all Lechler tank cleaning nozzles can be simulated – from the static spray ball to the high-impact tank cleaning machine. The result of the simulation is documented and provided in a PDF or video file. Simulation with TankClean can be used as the basis for optimum cleaning in the planning phase of new tanks, as well as to optimize existing tank cleaning processes.

Our unique service – your individual benefit

Planning certainty

We assist you in planning your tank cleaning solution to ensure cleaning without any gaps.

Process optimization

By simulating the existing cleaning processes, we show you the optimization potentials for these processes.

Process reliability

Thanks to realistic and individually customized process simulations, we can offer you individual solution concepts.

Cost and time savings

Simulation makes it possible to detect any potential problem areas before final definition of the cleaning concept. This makes it possible to significantly reduce the number of time- and cost-intensive practical cleaning tests.

Individual adaptation of tank geometries and built-in equipment

Selection of the right tank cleaning nozzles

Realistic simulation of the cleaning process

Documentation of the simulation results, including additional planning aids

Talk to us

Are you interested in tank cleaning simulations with TankClean? Ask your Lechler contact person for further information or give us a call. We will gladly help you in planning your tank cleaning solution.

➤ PNEUMATIC ATOMIZING NOZZLES

➤ PNEUMATIC ATOMIZING NOZZLES GENERAL INFORMATION

Pneumatic atomizing nozzles produce extremely fine droplets with a small droplet size. There are two options available: Internal Mixing (for lower viscosity fluids) where the mixing of gas and liquid happens inside the nozzle and External Mixing (for higher viscosity fluids) where the mixing of gas and liquid happens outside the nozzle. Depending on the option chosen, the liquid can be gravity/siphon fed or pressurized. Flat fan, full cone and solid stream spray patterns are available.

Pneumatic atomizing nozzles

- Produces extremely fine droplets.
- Wide range of liquid-supply.
- Internal or external mixing.
- Suitable for humidification, cooling and the atomization of viscous fluids.

Ordering Type + Material no. = Ordering no.
 example: 136.215.xx.B2 + 1Y = 136.215.1Y.B2

➤ Pneumatic atomizing nozzles, full cone, siphon principle, external mixing Series 136.3

Features:

- Particularly fine full cone atomization
- Gravity/Siphon principle
- External mixing

Applications:

- Cooling
- Atomization of viscous liquids
- Chemical industry

Series 136.3

➤ Pneumatic atomizing nozzles, wide flat fan, pressure principle, internal mixing

Series 136.4

Features:

- Fine flat fan atomization
- Pressure principle
- Internal mixing

Applications:

- Humidification of goods
- Cooling
- Belt humidification

Series 136.4

➤ Pneumatic atomizing nozzles, wide flat fan, siphon principle, internal mixing

Series 136.5

Features:

- Particularly fine flat fan atomization
- Siphon principle
- Internal mixing

Applications:

- Humidification of goods
- Cooling
- Belt humidification

Series 136.5

➤ Pneumatic atomizing nozzles, flat fan, pressure principle, external mixing Series 136.6

Features:

- Fine flat fan atomization
- Liquid pressure principle
- External mixing

Applications:

- Humidification of goods
- Cooling
- Belt humidification
- Atomization of viscous liquids

Accessories for pneumatic atomizing nozzles

Series 136.1 to 136.6

Overview of accessories

Regulating device and shut-off needle

Enables manual regulation of the flow rate and closing of the nozzle.

Material: Stainless steel 303
Weight: .07 lb

Ordering no.

Type

015.600.16

Suitable for all nozzles of series 136

Regulating device with quick-cleaning needle

Enables manual regulation of the flow rate and cleaning of the nozzle orifice.

Material: Stainless steel 303
Weight: .17 lb

➤ Pneumatic atomizing nozzles, full cone, pressure principle, internal mixing

Series 166.1

Features:

- Version with magnetic valve
- Fine full cone atomization
- Liquid pressure principle
- Internal mixing

Applications:

- Humidification
- Cooling

Technical data:

- Operating pressure: 0–87 psi
- Voltage: 24 V DC
- Power: 8 W
- Switching frequency: Approx. 500/min
- Protective system: IP 67
- Ambient temperature: +50 °C/+122 °F
- Cable length: 39.37 in
- Material of gasket: EPDM

➤ Pneumatic atomizing nozzles, wide full cone, pressure principle, internal mixing

Series 166.2

Features:

- Version with magnetic valve
- Fine full cone atomization
- Pressure principle
- Internal mixing
- Extra wide spray angle of 60°

Applications:

- Humidification of air
- Cooling

Technical data:

- Operating pressure: 0–87 psi
- Voltage: 24 V DC
- Power: 8 W
- Switching frequency: Approx. 500/min
- Protective system: IP 67
- Ambient temperature: +50 °C / +122 °F
- Cable length: 39.37 in
- Material of gasket: EPDM

➤ Pneumatic atomizing nozzles, flat fan, pressure principle, internal mixing Series 166.4

Features:

- Version with magnetic valve
- Fine flat fan atomization
- Liquid pressure principle
- Internal mixing

Applications:

- Belt humidification
- Cooling
- Humidification of goods

Technical data:

- Operating pressure: 0–87 psi
- Voltage: 24 V DC
- Power: 8 W
- Switching frequency: Approx. 500/min
- Protective system: IP 67
- Ambient temperature: +50 °C / +122 °F
- Cable length: 39.37 in
- Material of gasket: EPDM

Pneumatic atomizing nozzles, flat fan, pressure principle, external mixing

Series 166.6

Features:

- Version with magnetic valve
- Fine flat fan atomization
- Liquid pressure principle
- External mixing

Applications:

- Belt humidification
- Cooling
- Humidification of goods
- Atomization of viscous liquids

Technical data:

- Operating pressure: 0–8 psi
- Voltage: 24 V DC
- Power: 8 W
- Switching frequency: Approx. 500/min
- Protective system: IP 67
- Ambient temperature: +50 °C / +122 °F
- Cable length: 39.37 in
- Material of gasket: EPDM

Ordering Type + Material no. = Ordering no.
 example: 166.626.xx.B2 + 16 = 166.626.16.B2

➤ Pneumatic atomizing nozzles, full cone, siphon principle, internal mixing Series 140

Features:

- Particularly fine full cone atomization
- Siphon principle
- Internal mixing
- Integrated regulating device
- Material: Brass

Applications:

- Lubrication
- Cooling
- Humidification

Series 140

Material	Weight [lb]
Brass	0.07

Accessories:

- Gasket
014.040.72
7.8 x 12 x 1 (EWP 210)

- Nipple
014.010.30.04
(Material: Brass)
Weight: .04 lb

➤ Pneumatic atomizing nozzles for atomizing viscous media

Series 176 ViscoMist

The ViscoMist™ series offers independent regulation of both atomizing air and fan air, which provides the user with infinite control over the viscous fluid's spray pattern and roplet size.

The ViscoMist™ nozzle features a standard 'Liquid Shut-Off/Clean-Out Needle' function. This design element activates and deactivates the liquid supply, while simultaneously removing excess fluid from the fluid nozzle preventing clogging. This feature is especially vital when the viscous liquids are being applied in continuous process environments.

The modular design of the ViscoMist™ allows maximum flexibility to meet the exact spray requirements.

Interchangeable air caps and various flow capacities are available to suit any spraying application needs.

Series 176 ViscoMist

External mixing nozzle for viscous liquids, e.g. for:

- Coating processes
- Moisturising
- Lubrication
- Glazing
- Disinfection

One nozzle – several spray characters:

- Spray characters
 - Solid stream
 - Full cone
 - Flat fan
- Independent regulation of liquid, atomizing air and fan air
- Fluid circulation possible (nozzle body with five connections)

Nozzle sizes:

- Ø 0.01 in to 0.10 in

Valve position:

- Normally closed, fail-safe with loss of air

Signal air pressure:

- Min. 30 psi, max. 45 psi

Cycles per minute:

- 180 cycles/min (short term)

Connection thread:

- 1/8 NPT
- BSPP thread available on request

Weight:

- 1.21 lb

Material:

- 1Y (stainless steel 316L)

Flow rate range:

- Water: .55 to 21.4 gal/hr, at 30 psi
- Air 27.5 to 104.12 gal/min in normal condition, at 30 psi

Atomizing air/Signal air/Fan air:

The atomizing air causes the liquid to atomize at the nozzle orifice. The spray character can be adjusted with the fan air to suit the application. The signal air activates the nozzle.

Nozzle body configurations

Nozzle body configuration 2

Version with three connections

Nozzle body configuration 4

Version with four connections

Nozzle body configuration 5

Version with five connections

 * A cone-shaped spray pattern is produced without fan air.

➤ Spare parts set for pneumatic atomizing nozzles Series 176 ViscoMist

Overview of the spare parts set and the power set

Spare parts set

Spare parts set for replacing the main wear parts of the nozzle, consisting of:

- Needle (stainless steel 316L)
- O-rings (Viton)
- Nozzle tip (stainless steel 316L)

Power set

Power set for replacing the main wear parts of the nozzle and the air hood, consisting of:

- Needle (stainless steel 316L)
- O-rings (Viton)
- Nozzle tip (stainless steel 316L)
- Spreader (stainless steel 316L)

017.609.1Y.00	0.100	176.xx9.1Y.11.00

Notice:

Instructions for replacing individual or all components of the nozzles are included in the scope of delivery of the spare parts sets and the power sets.

O-ring set

Type	Ordering number		Consisting of 4 O-rings, suitable for all nozzles of series 176
	Material number		
	7A	6C	
	Viton	EPDM	
017.600.xx.01.03	●	●	

Viton (7A) is the standard O-ring material.
EPDM (6C) is optionally available.

Ordering Type + Material no. = Ordering no.
example: 017.600.xx.01.03 + 7A = 017.600.7A.01.03

➤➤ HOLLOW CONE NOZZLES

»» HOLLOW CONE NOZZLES OVERVIEW OF TYPES

Hollow cone nozzles are used wherever fine droplets are required. A distinction is made between axial-flow hollow cone nozzles and tangential-flow hollow cone nozzles. Axial-flow hollow cone nozzles are mainly used for cooling, humidification and disinfecting, while tangential-flow hollow cone nozzles are traditionally used for humidification, dust control, sprinkling and foam control.

Axial-flow hollow cone nozzles

- High and controlled degree of atomization due to integrated swirl insert.
- Narrow droplet size spectrum.
- Uniform atomization.
- Large droplet surface area for mass transfer processes.

Tangential-flow hollow cone nozzles

- Liquid rotation without swirl insert.
- Clog-resistant maximum free passage.
- Large free cross sections.
- Operational reliability.
- Coarse droplets that are larger than axial-flow hollow cone nozzles.

Hollow cone nozzles

Also available in BSPP

Mat. no.	Housing	Nozzle insert	Strainer
1Y	Stainless steel 316L	Stainless steel 316L	Stainless steel 316L
11	Stainless steel 430F	Stainless steel 430F	Stainless steel 316L

The supplied and integrated strainer insert prevents clogging of the nozzle, thereby ensuring a long service life.

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. + Code = Ordering no.
example: 220.004 + 1Y + BC = 220.004.1Y.BC

 Assembly accessories can be found in Chapter 12 "Accessories".

➤ Axial-flow hollow cone nozzles

Series 226

Features:

- Extremely fine, fog-like atomization
- Assembly with retaining nut

Applications:

- Humidification
- Cooling
- Disinfection
- Chemical engineering
- Adiabatic cooling

Mat. no.	Housing	Nozzle insert	Strainer
16	Stainless steel 303	Stainless steel 430F	Stainless steel 316L

The supplied and integrated strainer insert prevents clogging of the nozzle, thereby ensuring a long service life.

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering example: Type 226.004 + Material no. 16 = Ordering no. 226.004.16

Assembly accessories can be found in Chapter 12 "Accessories".

➤ Axial-flow hollow cone nozzles

Series 214/216/218

Features:

- Fine, uniform atomization

Applications:

- Cooling
- Gas washing
- Dust control
- Sprinkling
- Adiabatic cooling

Series 214/216/218

Assembly example

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering example: Type 2TR.245 + Material no. C8 = Ordering no. 2TR.245.C8

Assembly accessories can be found in Chapter 12 "Accessories".

➤ Tangential-flow hollow cone nozzles, stainless steel/brass version

Series 302

Features:

- Uniform atomization
- Clog-resistant nozzle without swirl insert

Applications:

- Humidification
- Dust control
- Sprinkling
- Foam control
- Adiabatic cooling

Series 302

* Material only available in BSPP

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. = Ordering no.
 example: 302.328 + 5E = 302.328.5E

Assembly accessories can be found in Chapter 12 "Accessories".

➤ Tangential-flow hollow cone nozzles, plastic version with bayonet quick-release system

Series 302

Features:

- Uniform atomization
- Clog-resistant nozzle without swirl insert
- Quick and secure assembly thanks to bayonet quick-release system
- Fixed alignment

Series 302

Applications:

- Humidification
- Dust control
- Sprinkling
- Foam control
- Adiabatic cooling

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering example: Type 302.503 + Material no. 51 + Code KB = Ordering no. 302.503.51.KB

Assembly accessories can be found in Chapter 12 "Accessories".

➤ Tangential-flow hollow cone nozzles

Series 308

Features:

- Uniform atomization
- Clog-resistant nozzle without swirl insert
- Adjustable flow rate

Applications:

- Humidification in air washers
- Dust control
- Spraying onto filters
- Foam control
- Cooling

Series 308

G	Dimensions [in]						Weight [lb]
	C ₁	C ₂	H	L ₁	L ₂	Hex (mm)	
3/8 BSPP	1.34	0.31	1.57	1.42	0.91	22	0.33

Spray angle	Ordering number		Bore diameter B [in]	Narrowest free cross section Ø [in]	\dot{V}_{\max} water [gal/min]							Spray diameter D [in] (at p = 30 psi)		
	Type	Mat. no.			p [psi]

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. = Ordering no.
example: 308.466 + 30 = 308.466.30

Assembly accessories can be found in Chapter 12 "Accessories".

➤ Tangential-flow hollow cone nozzles

Series 304/306/307

Features:

- Uniform atomization
- Clog-resistant nozzle without swirl insert

Applications:

- Storage tank cooling
- Foam control
- Dust control
- Surface treatment
- Absorption

Series 304/306/307

Series	G	Dimensions [in]							Weight [lb] (Brass)

Available in NPT with adaptor add-on.

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. = Ordering no.
example: 304.706 + 1Y = 304.706.1Y

Assembly accessories can be found in Chapter 12 "Accessories".

➤ Tangential-flow hollow cone nozzles

Series 350

Features:

- High performance nozzle for humidification
- Very narrow droplet size spectrum
- Extremely uniform liquid distribution over the entire spray pattern
- Quick-release clamp unit available for pipe mounting

Applications:

- Foam control
- Dust control
- Surface treatment
- Absorption

Series 350

G	Dimensions [in]				Weight [lb]	P _{max} [psi]
	H ₁	H ₂	L	Ø D

Accessories:

Recommended bore diameter 18 mm.

Quick-release clamp unit: Ordering no. 035.030.15.05.00.0.

Consisting of: Stainless steel clamp, polyurethane gasket.

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. = Ordering no.
example: 350.368 + 56 = 350.368.56

Assembly accessories can be found in Chapter 12 "Accessories".

➤ Eccentric hollow cone nozzles

Series 373 Ramp Bottom

Features:

- Fine, uniform atomization even at low pressure
- Patented swirl chamber with built-in ramp extends service life

Applications:

- Gas cooling
- Water recooling
- Dust control

Series 373

Other sizes and flow rates available upon request

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. + Code = Ordering no.
 example: 373.115 + 17 + BN = 373.115.17.BN

Assembly accessories can be found in Chapter 12 "Accessories".

➤➤ FULL CONE NOZZLES

➤ FULL CONE NOZZLES OVERVIEW OF TYPES

Lechler full cone nozzles are characterised by uniform liquid distribution over the entire circular impact area and are used, among other things, for surface spraying, in cleaning and washing processes and also in chemical process engineering. Full cone nozzles come in a variety of sizes and are made available as an axial full cone or a tangential full cone design. For special applications, unique types are made available, e.g. cluster head nozzles and deflector-plate nozzles.

Axial-flow full cone nozzles

- Axial flow
- Uniform liquid distribution
- Full surface impact
- Extensive flow rate range
- Extensive range of spray angles
- Standard materials:
Stainless steel 316Ti/316L, Brass, PVDF (special material available on request)

Tangential-flow full cone nozzles

- Tangential flow
- Uniform liquid distribution
- Full surface impact
- Maximum free passage making less susceptible to clogging
- Stable spray angle
- Standard materials:
Stainless steel 316L, Brass, PVDF (special material available on request)

Cluster head nozzles

- Axial flow
- Multi-nozzle spray head
- Full surface impact
- Atomized spray – very fine droplets
- Small droplet sizes
- Enlarged droplet surface area
- Standard materials:
Stainless steel 316Ti/316L, Brass
(special material available on request)

Deflector-plate nozzles

- Axial flow
- Large impact area
- Large free cross sections
- Standard materials:
Stainless steel 316Ti/316L, Brass
(special material available on request)

¹ Material PP (mat. no. 53).
Also available in metric thread.

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \left(\frac{p_2}{p_1}\right)^{0.4}$
(≤ 10 bar)

Ordering Type + Material no. + Connection = Ordering no.
example: 460.326 + 5E + CB = 460.326.5E.BA

Assembly accessories can be found in Chapter 12 "Accessories".

➤ Axial-flow full cone nozzles Series 490/491

Features:

- Extremely uniform liquid distribution
- Very stable spray angle
- Non clogging due to large free cross sections

Applications:

- Cleaning and washing processes
- Surface spraying
- Chemical process engineering
- Foam control

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \left(\frac{p_2}{p_1}\right)^{0.4}$
(≤ 10 bar)

Ordering Type + Material no. + Connection = Ordering no.
example: 452.661 + 16 + BC = 452.661.16.BC

➤ Axial-flow full cone nozzles Series 405

Features:

- Extremely uniform liquid distribution

Applications:

- Surface spraying
- Chemical process engineering
- Cleaning and washing processes
- Water treatment

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \left(\frac{p_2}{p_1}\right)^{0.4}$
(≤ 10 bar)

Ordering Type + Material no. + Connection = Ordering no.
example: 405.204 + 1Y + BP = 405.204.1Y.BP

 Assembly accessories can be found in Chapter 12 "Accessories".

Full cone nozzles Axial-flow CenterJet™ Series 459

Features:

- Turbine-style vane for uniform atomization and distribution

Applications:

- Surface spraying
- Quench cooling
- Fire suppression
- Chemical processing

¹ We reserve the right to supply material 316Ti or 316L under material no. 17.

* Nozzles are manufactured to spray performance, not orifice diameter.

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \left(\frac{p_2}{p_1}\right)^{0.4}$
(≤ 10 bar)

Ordering example: Type 459.455 + Material no. 17 + Conn. BW = Ordering no. 459.455.17.BW

Notice:

This product line is also available in larger capacities with inlets up to 6" in size.

Please contact Lechler if you have an application requiring a larger size.

➤ Axial-flow full cone nozzles Series 403

Features:

- Extremely uniform liquid distribution

Applications:

- Surface spraying
- Spraying over packings
- Chemical process engineering
- Cleaning and washing processes
- Cooling

example: 403.446 + 1Y = 403.446.1Y

Assembly accessories can be found in Chapter 12 "Accessories".

➤ Axial-flow full cone nozzles Series 419 FreeFlow

Features:

- Non clogging due to very large free cross sections
- Very stable spray angle
- Uniform liquid distribution

Applications:

- Cleaning and washing processes
- Dust control
- Absorption
- Distillation

¹ Spray angle at 1 bar.

Also available in metric thread.

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \left(\frac{p_2}{p_1}\right)^{0.4}$
(≤ 10 bar)

Ordering Type + Material no. + Connection = Ordering no.
example: 419.366 + 1Y + BV = 419.366.1Y.BV

 Assembly accessories can be found in Chapter 12 "Accessories".

➤ Axial-flow full cone nozzles Series 485

Features:

- One piece design
- Generates large droplets and even droplets at a wide a wide range of operating pressures

Applications:

- High volume surface spraying
- Cooling and quenching
- Fire protection
- Chemical processing and scrubbers

Series 485

* Nozzles are manufactured to spray performance, not orifice diameter

➤ Tangential-flow full cone nozzles stainless steel/brass version Series 422/423

Features:

- Tangentially arranged supply of liquid
- Without swirl inserts
- Non-clogging
- Stable spray angle
- Uniform liquid distribution

Applications:

- Surface spraying
- Cooling
- Cleaning and washing processes
- Foam control

Also available in metric thread.

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{P_2}{P_1}}$

Ordering Type + Material no. + Connection = Ordering no.
example: 422.488 + 30 + CC = 422.488.30.CC

Assembly accessories can be found in Chapter 12 "Accessories".

Also available in metric thread.

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. + Connection = Ordering no.
 example: 422.888 + 1Y + BE = 422.888.1Y.BE

Assembly accessories can be found in Chapter 12 "Accessories".

➤ Tangential-flow full cone nozzles, plastic version

Series 422/423

Features:

- Tangentially arranged supply of liquid
- Without swirl inserts
- Non-clogging
- Stable spray angle
- Uniform liquid distribution
- High chemical resistance

Applications:

- Surface spraying
- Cooling
- Cleaning and washing processes
- Foam control

Cluster head nozzles Series 502/503

Features:

- Fine, uniform atomization
- Stable spray angle
- Space-saving installation
- Maintenance-friendly design
- High temperature and chemical resistance

Applications:

- Chlorine precipitation
- Absorption
- Dust suppression
- Degassing of liquids
- Desuperheating

Assembly accessories can be found in Chapter 12 "Accessories".

FLAT FAN NOZZLES

FLAT FAN NOZZLES OVERVIEW OF TYPES

Lechler flat fan nozzles produce evenly distributed jets of water. Flat fan nozzles are generally used in cleaning processes and throughout many areas of surface treatment. Numerous designs – including tongue-type nozzles for special applications – and extensive assembly accessories enable easy installation as well as quick nozzle changeovers.

Standard flat fan nozzles

- Particularly high-energy spray with spray angles of up to 120°
- Parabolic liquid distribution
- Unaffected by transient pressures
- Simple and cost-saving assembling options

Tongue-type nozzles

- Special design in which a solid stream is diverted by a deflector plate
- Powerful, sharply delimited spray
- Shape of the deflector plate determines the spray angle
- Clog resistant due to large free cross-sections

Spray angle in degrees

Flow rate in US gal/min at 40 psi

Conversion: Value · 3.22 = flow rate in l/min at 2 bar

example: 0.2 gal/min at 40 psi = 0.644 l/min at 2 bar

Good to know

Information on the arrangement of several flat fan nozzles can be found in Chapter "Planning Aids" on page 27.

Low pressure flat fan nozzles

Series 632/633

Features:

- Uniform, parabolic liquid distribution
- Stable spray angle
- Tapered, self-sealing thread

Applications:

- Spray cleaning
- Surface cleaning
- Strainer insert cleaning
- Coating processes
- Belt cleaning
- Lubrication processes

Series 632/633

* Differing spray pattern.

¹ We reserve the right to supply material 303 or 304 under material no. 16.

² We reserve the right to supply material 316Ti or 316L under material no. 17.

³ Only available with Code BC.

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. + Code = Ordering no.
example: 632.216 + 16 + BA = 632.216.16.BA

Assembly accessories can be found in Chapter 12 "Accessories".

Low pressure flat fan nozzles

Series 610

Features:

- Uniform, parabolic liquid distribution
- Stable spray angle
- Compact design for narrow installation conditions

Applications:

- Spray cleaning
- Surface cleaning
- Strainer insert cleaning
- Coating processes
- Belt cleaning
- Lubrication processes

* Differing spray pattern.
NPT version available by request

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. = Ordering no.
example: 610.304 + 16 = 610.304.16

Assembly accessories can be found in Chapter 12 "Accessories".

Low pressure flat fan nozzles

Series 612

Features:

- Uniform, parabolic liquid distribution
- Stable spray angle
- Compact design for narrow installation conditions

Series 612

Applications:

- Spray cleaning
- Surface cleaning
- Strainer insert cleaning
- Coating processes
- Belt cleaning
- Lubrication processes

NPT version available by request

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. = Ordering no.
example: 612.187 + 16 = 612.187.16

Assembly accessories can be found in Chapter 12 "Accessories".

Low pressure flat fan nozzles

Series 616/617

Features:

- Uniform, parabolic liquid distribution
- Stable spray angle
- Compact design for narrow installation conditions

Series 616/617

Applications:

- Spray cleaning
- Surface cleaning
- Filter cleaning
- Coating processes
- Belt cleaning
- Lubrication processes

¹ We reserve the right to supply material 316Ti or 316L under material no. 17.
Available in NPT upon request

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. = Ordering no.
example: 616.724 + 16 = 616.724.16

Assembly accessories can be found in Chapter 12 "Accessories".

Low pressure flat fan nozzles

Press-in nozzle

Series 612.xxx.5E.03

Features:

- Uniform, parabolic liquid distribution
- For pressing into pipes

Applications:

- Cleaning and rinsing procedures
- Industrial dish washers

Series 612.xxx.5E.03

Dimensions [in]				Weight [g]
L ₁	L ₂	Ø D	Flats (mm)	
.49	.22	.55	12	.004

	612.647	●	0.10	0.50	0.40	0.52	0.62	0.76	0.92	1.08	4.00	28	50

Assembly :

Drill pipe (Ø .4 in), ream to Ø .4 H11 (+0.09) in, adjust nozzle, place press-in pipe (inner diameter .48 in) on nozzle and tap in using a rubber mallet. Max. flow velocity in the pipe 2–3 m/s.

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. = Ordering no.
example: 612.366 + 5E.03 = 612.366.5E.03

Assembly accessories can be found in Chapter 12 "Accessories".

Flat Fan Nozzle Tips

Series 672/673

Features:

- Socket alignment flats

Applications:

- Cooling
- Lubricating

Low pressure flat fan nozzles for retaining nut

Series 652

Features:

- Uniform, parabolic liquid distribution
- Stable spray angle
- Assembly with retaining nut

Series 652

Applications:

- Spray cleaning
- Surface cleaning
- Filter cleaning
- Coating processes
- Belt cleaning
- Lubrication processes

Caps			
To fit 11/16x16		069. 000. XX. 00	Other materials available. See Accessories beginning on page 127.
To fit 3/8 BSPP		065. 200. XX. 00	

Example Type + Material no. = Ordering no.
for ordering: 652. 407 + 30 = 652. 407. 30

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. = Ordering no.
example: 652.187 + 16 = 652.187.16

1) We reserve the right to deliver material 316 SS or 316L SS, if we show the material code 17.

Assembly accessories can be found in Chapter 12 "Accessories".

Low pressure flat fan nozzles for retaining nut

Series 656/657

Features:

- Uniform, parabolic liquid distribution
- Stable spray angle
- High spray energy
- Assembly with retaining nut
- Non-clogging

Series 656/657

Applications:

- Cleaning installations
- Gravel washing
- Roll cooling
- Cooling of rolled stock
- Cooling pipes

¹ We reserve the right to supply material 316Ti or 316L under material no. 17.

Inlet Male NPT	Outlet Male	Part No.	Standard Materials: 17 316 SS 30 Brass
3/4"	3/4" BSPP	065. 611. XX. BK	
Cap			Other materials available. See Accessories beginning on page 127.
To fit 3/4" BSPP		065. 600. XX. 00	

Example Type + Material no. = Ordering no.
for ordering: 656. 727 + 16 = 656. 727. 16

1) We reserve the right to deliver material 316 SS or 316L SS, if we show the material code 17.

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. = Ordering no.
example: 656.724 + 16 = 656.724.16

Assembly accessories can be found in Chapter 12 "Accessories".

Low pressure tongue-type nozzles

Series 684

Features:

- Sharply delimited, powerful flat fan spray
- Large spray angle
- Assembly with retaining nut
- Non-clogging

Applications:

- Foam control
- Cleaning processes
- Washing processes

Series 684

¹ Only available with code BA.

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. + Code = Ordering no.
 example: 686.366 + 30 + BA = 686.366.30.BA

Assembly accessories can be found in Chapter 12 "Accessories".

Low pressure tongue-type nozzles

Series 688/689

Features:

- Narrowly delimited, powerful flat fan spray
- Non-clogging

Applications:

- Cleaning processes
- Washing processes
- Degreasing installations
- Phosphating installations
- Preparation techniques

Series 688/689

Type	Connection	G	Dimensions [in]		Weight [lb]
			L	Hex (mm)

	35°	689.003	●	●	BK		0.24	4.09	5.98	8.46	31.50	13.38	9	17

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering example: Type 688.763 + Material no. 16 + Code BE = Ordering no. 688.763.16.BE

Assembly accessories can be found in Chapter 12 "Accessories".

Threaded Disc type tips

Series 680

Features:

- Excellent for inexpensive headers with minimal clearance
- Orifices thread directly into pipe wall without any protrusion

Series 680

Applications:

- Belt washing
- Web coating
- Spray washing of products on conveyors

¹ We reserve the right to supply material 316Ti or 316L under material no. 17.

Tungsten carbide available upon request

* 60° spray angle

** 70° spray angle

*** 75° spray angle

Assembly accessories can be found in Chapter 12 "Accessories".

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering example: Type 690.345 + Material code 17 = Ordering no. 690.345.17

Low pressure flat fan nozzles with ball joint

Series 676

Features:

- Swivelling nozzle
- Precise spray alignment according to requirements
- Assembly with retaining nut, threaded socket, threaded nipple, welded nipple

Applications:

- Cleaning
- Cooling
- Lubrication

Series 676

* Differing spray pattern.

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. = Ordering no.
example: 676.514 + 16 = 676.514.16

Assembly accessories can be found in Chapter 12 "Accessories".

Low pressure flat fan nozzles with dovetail guide

Series 660

Features:

- Uniform, parabolic liquid distribution
- Stable spray angle
- Spray automatically aligned approx. 5° to the longitudinal axis of the pipe due to dovetail guide
- Assembly with retaining nut
- Non-clogging
- High spray energy

Series 660

Applications:

- Cleaning installations
- Spray pipes
- Cooling pipes

* Differing spray pattern.

¹ We reserve the right to supply material 316Ti or 316L under material no. 17.

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. = Ordering no.
example: 660.484 + 16 = 660.484.16

Assembly accessories can be found in Chapter 12 "Accessories".

Accessories

Nipple **066. 011. 17** (316 SS) Weight: .14 lb.

Retaining nut **065. 200. 16** (303 SS)
065. 200. 17 (316 SS)
065. 200. 30 (Brass) Weight: .13 lb.

Standard accessories, alignment, and installation for the Series 664 dovetail nozzle tip

A listing of alternatives for various assembly possibilities is shown in the Accessories section beginning on page 127.

Low pressure flat fan nozzles with dovetail guide

Series 664/665

Features:

- Uniform, parabolic liquid distribution
- Stable spray angle
- Spray automatically aligned approx. 15° to the longitudinal axis of the pipe via dovetail guide
- Assembly with retaining nut
- Non-clogging
- High spray energy

Series 664/665

Applications:

- Cleaning installations
- Spray pipes
- Roll cooling
- Cooling pipes
- Cooling of rolled stock

Accessories

Standard accessories, alignment, and installation for the Series 664 dovetail nozzle tip

A listing of alternatives for various assembly possibilities is shown in the Accessories section beginning on page 127.

High pressure flat fan nozzles

Series 602

Features:

- Sharp, uniform flat fan spray
- Extremely narrow spray depth
- Housing: Stainless steel 303,
Insert: Hardened stainless steel 420F

Applications:

- High pressure cleaning

Series 602

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{P_2}{P_1}}$

Assembly accessories can be found in Chapter 12 "Accessories".

Ordering example: 602 + 361 + A3 + 00 = Ordering no. = 602.361.A3.00

High pressure flat fan nozzles

Series 608

Features:

- Sharp, uniform flat fan spray
- Extremely narrow spray depth
- Housing: Stainless steel 303,
Insert: Hardened stainless steel 420F

Applications:

- High pressure cleaning

Series 608

Ordering Type + Material no. + Code = Ordering no.
example: 6FH.404 + A3 + BA = 6FH.404.A3.BA

1) We reserve the right to deliver material 316 SS or 316L SS, if we show the material code 17.

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Assembly accessories can be found in Chapter 12 "Accessories".

Ordering Series + Flow rate code + Material no. + Code = Ordering no.
example: 6FH + 541 + A3 + BA = 6FH.541.A3.BA

Low pressure flat fan nozzles

Belt lubrication

Series 652

Features:

- Particularly low flow rate
- Parabolic liquid distribution
- Assembly with retaining nut

Applications:

- Belt lubrication
- Spraying on food products
- Moistening of rollers
- Oiling of metal sheets

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. = Ordering no.
example: 652.145 + 16 = 652.145.16

Assembly accessories can be found in Chapter 12 "Accessories".

Easy Flush foam control nozzles

Series 564

Features:

- Efficient flat fan spray
- Quick removal without complete nozzle replacement
- Reduced clogging due to larger free passage
- Reduced pumping costs due to low pressure liquid flow

Series 564

Applications:

- Foam control in aeration tanks

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Low pressure flat fan nozzles

Series 646

Features:

- Uniform, parabolic liquid distribution
- Adjusted spray direction
- Simple, fast manual assembly due to bayonet quick-release system

Applications:

- Belt cleaning
- Surface treatment
- Spray cleaning
- Coating processes

Assembly example

Bayonet quick-release base options for use with Series 646 nozzle

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. = Ordering no.
example: 646.306 + 5E = 646.306*

Assembly accessories can be found in Chapter 12 "Accessories".

➤➤ Nozzle systems for surface treatment

Series 676/677 MEMOSPRAY

Features:

- Retention of the adjusted spray direction when changing nozzles
- Simple, quick nozzle assembly without the need for tools
- Many combination options
- Large range of flow rates, spray angles and materials

Applications:

- Degreasing
- Phosphating in surface treatment
- Industrial cleaning
- Container washers

Assembly example

➤➤ Nozzle systems for surface treatment

Series 676 Easy-Clip

Features:

- Simple, quick nozzle assembly without the need for tools
- All-round 30° swivelling
- Easy adjustment and cleaning

Applications:

- Degreasing
- Phosphating in surface treatment
- Industrial cleaning
- Container washers

Materials:

- Clamp: Stainless steel 301
- Gasket: EPDM
- Cylinder pin, screw, screw unit: Stainless steel 316L
- Body, retaining nut: Polypropylene, glass fibre reinforced
- Ball nozzle, ball joint: Polypropylene

➤➤ SOLID STREAM NOZZLES

» SOLID STREAM NOZZLES OVERVIEW OF TYPES

Lechler solid stream nozzles are characterized by a stable and powerful jet stream, with low pressure and high pressure variants available. When concentrated spray power is required, e.g. in cleaning processes, the precision of Lechler solid stream nozzles enhances the productivity and performance for every installation.

Low pressure and high pressure solid stream nozzles

- Concentrated solid jet stream, minimal atomization
- High impact
- Suitable for cleaning and washing processes
- Injection
- Targeted cooling
- Pasteurization

Solid stream
nozzles

International nozzle code

High pressure solid stream nozzle designations are governed by international standards. The two digits specify the flow rate in US gallons per minute at 40 psi. Our high pressure solid stream nozzles (series 546/548/550) are specified with this international nozzle code.

02

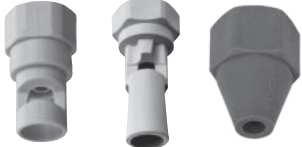

→ Flow rate in US gal/min at 40 psi

Low pressure solid stream nozzles

Series 544

Properties:

- Concentrated solid stream jet
- High impact

Applications:

- Cleaning and washing processes
- Injection
- Targeted cooling
- Pasteurization

Series 544

Conversion formula for this series: $\dot{V}_2 = \dot{V}_1 \cdot \sqrt{\frac{p_2}{p_1}}$

Ordering Type + Material no. + Code = Ordering no.
 example: 544.110 + 16 + BA = 544.110.16.BA

Assembly accessories can be found in Chapter 12 "Accessories".

High pressure solid stream nozzles

Series 546

Properties:

- Concentrated solid stream jet
- High impact
- Housing 303 SS, insert: Hardened stainless steel 420F

Applications:

- Cleaning and washing processes

Series 546

Notice:

The ruby orifice produces a tightly collimated solid stream for precise, predictable cutting action. The optional strainer offers a convenient way to protect against clogging caused by stray fibers or loose bits of debris in your liquid supply. The ruby orifice is permanently mounted in a brass housing. The optional strainer is 316 stainless steel.

 AIR NOZZLES

» AIR NOZZLES GENERAL INFORMATION

Compressed air is an indispensable tool in many areas for drying, cooling, cleaning, conveying, blowing off and much more. Lechler air nozzles make all this possible – with the highest level of precision at extraordinarily favorable conditions.

The three advantages of Lechler air nozzles for you

Cost efficiency

Lechler nozzles make it possible to reduce compressed air consumption by up to 45% compared to open pipes. As a result of increasing energy costs and the growing range of compressed air applications, it is not surprising that there are extremely high potential savings in this area. An advantage that will have direct positive impact on your business.

Employee safety

The unique design of our nozzles allows noise levels to be verifiably reduced by up to 25% compared to conventional solutions – thus also reducing noise-related stress for your employees. Noise levels have been confirmed to reduce concentration resulting in increased levels of stress. The use of low-noise nozzles has a positive effect on employee wellbeing and production quality.

Service offering

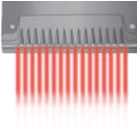

A perfect solution must be optimally tailored to your local requirements. We will, therefore, gladly advise you in person about the use of air nozzles and introduce you to new possibilities. Contact us and let us help you come up with the best possible solution for improved quality and optimized process reliability.

Good to know

Detailed information can be found in our brochure "Air nozzles" as well as at www.lechler.com/de-en/airnozzles.

Multi-channel flat fan nozzles for air "Whisperblast", plastic version Series 600.130.56/S2

Features:

- Laminar, powerful air stream
- Low noise level (also at higher levels of pressure)

Applications:

- Blowing off and out
- Cleaning
- Drying
- Cooling
- Transporting

Series 600.130.56/S2

¹ Meets OSHA specifications in terms of noise level.

Flat fan nozzles for air or saturated steam Series 679

Features:

- Wide, powerful air stream
- Assembly with retaining nut
- Easy nozzle changing
- Simple jet alignment

Applications:

- Blowing off liquids
- Cooling
- Heating
- Drying

Cluster solid stream nozzles for air or saturated steam

Series 540/541

Features:

- Powerful round jet through 40 individual bore holes
- Delivery of media at an angle of approx. 240°
- Suitable for use in difficult conditions
- Suitable for immersion in liquid media

Series 540/541

Applications:

- Injection of steam into liquids
- Injection of compressed air into bulk goods
- Injection of gas (acid and neutralization baths)

COMBINATIONS

NOZZLE-VALVE COMBINATIONS

VarioSpray SYSTEMS

Innovative and flexible spraying solutions opens up new application areas.

The demand for more efficient production processes is increasing in almost every industry. Even already extremely efficient spraying technology processes are affected – particularly when spraying very small liquid volumes. Pneumatic systems are often used here, as very small flow rates can be achieved by using compressed air. However, the control and installation activities are extremely complex. Additionally, the use of air can have an unfavorable effect on operating costs. Aerosols may also be formed and liquid lost due to the rebound effect. With the VarioSpray HP and VarioSpray II hydraulic pulse-width-modulated nozzle-valve systems, Lechler offers two alternatives that are as versatile as they are reliable.

With hydraulic nozzle systems, the narrowest cross section of the spray nozzle determines the liquid flow rate. Due to economical and production-related reasons, the narrowest cross section can't be randomly minimized. Instead, we use flexible timing of the spray duration to achieve minimal flow rates – without the need for an expensive and complex pneumatic atomizing system. In addition to the VarioSpray HP and VarioSpray II nozzle-valve systems, a control unit is also required to permit simple modification of the pulse-width and cycle frequency.

Applications

- Oil application for applying seasoning
- Web humidification
- Application of separating agent
- Humidification
- Coating
- Anti-scuffing

Your advantages

- Simple adjustment of the pulse-width and the cycle frequency
- Modular design and modular system
- Start/Stop signal (e.g. via light barrier)
- Individual valve control for VarioSpray HP
- Rinsing function

Good to know

Detailed information can be found in our brochure "VarioSpray" as well as at www.lechlerusa.com/en/products/product-by-type/variospray.

Minimal amounts

Thanks to the use of pulse-width-modulated valves, even the smallest liquid quantities can be hydraulically atomized with maximum precision.

This control method permits:

- Flexible and immediate response to changed ambient parameters (e.g. belt speed)
- Uniform jet and spray quality
- Further application benefits due to a significantly increased turn-down ratio

Resource and cost savings

The aerosol-free atomization of smallest liquid volumes offers specific benefits for spray nozzle operation. The fact that no atomizing air is used means a huge reduction in rebound effects.

The following costs are reduced as a result:

- Equipment cleaning
- Operating costs of extraction systems
- Liquid losses because the liquid being atomized is applied to the product in a more targeted manner

Flexibility

The Lechler VarioSpray system is completely modular, allowing it to be adapted to individual requirements as flexibly as possible.

The result is a perfectly coordinated product portfolio including:

- Optimum valve control due to perfectly matched electronic components
- Modular spray bars
- Various predefined Lechler control concepts
- Individual advice from our sales staff

What is pulse-width modulation?

Pulse-width modulation refers to the variation of the ON time t_{on} / OFF time t_{off} of a square-wave signal when the frequency f remains constant. Here, the frequency f corresponds to the reciprocal value of the period duration T .

The ratio of the ON time t_{on} to the period duration T is referred to as the pulse-width ratio (DC = duty cycle). The pulse-width ratio determines the flow rate. The valve is open during the ON time t_{on} . The shorter the DC, the less the flow rate. Depending on the frequency selected, the pulsation is barely visible to the human eye.

Which fluids can be sprayed?

The two innovative Lechler products VarioSpray HP and VarioSpray II can be used to precisely spray a wide range of different liquids. The two nozzle-valve systems are individually designed to optimally perform these tasks.

VarioSpray HP was developed to permit flexible spraying of a wide variety of liquids. Even high-viscosity media (up to 75 mPas, depending on the liquid density) can be easily atomized.

VarioSpray II is ideal for applying small volumes of low-viscosity, easily atomized liquids.

COMPARISON

VarioSpray HP – VarioSpray II

VarioSpray HP

High Performance

Flow rate: Up to 33.81 oz/min at 43.51 psi¹

For high viscosity media up to 75 mPa·s

Liquid supply at the rear

Flow-optimized liquid supply

Simple nozzle changeover

Turn-down ratio up to 29 : 1

Filter optionally available

Push-in connection for
8 mm hose diameter

Voltage 12 V DC/24 V DC for Peak & Hold
activation

Electrical connection via M8 slip-on connection

Control via colour touch panel

Two control unit versions:

- SMART (max. 8 valves)
- FLEX (max. 16 valves)

Individual valve control (FLEX)

Frequencies: 10/20/30/40/50/75/100/200 Hz

VarioSpray II

Flow rate: Up to 4.73 oz/min at 43.51 psi¹

For low viscosity media up to 15 mPa·s

Liquid supply at the side

Low liquid volume in the valve

Very small design

Turn-down ratio up to 11 : 1

Integrated last-chance filter

Push-on connection
for 6 × 1 mm hose diameter

Voltage 24 V DC

M8 slip-on connection

Compact control unit

Simple operation
(max. 8 valves)

All valves activated simultaneously

Frequencies: 25/50/75/100 Hz

¹ Nominal flow rate without nozzle.

FOR THE BEST SPRAY RESULTS

VarioSpray HP

High Performance

The HP series can be used to atomize a wide variety of liquids. All parts that come into contact with liquids are made of stainless steel, thereby complying with Directives EC 1935/2004 and FDA regulations.

Components and combination options

Individual valve

Combination example of the components

Good to know

Detailed information on VarioSpray HP along with the order numbers of the system components can be found in our brochure "VarioSpray". A PDF is available for download at www.lechlerusa.com/en/products/product-by-type/variospray

VarioSpray II

Nozzle valves of the VarioSpray II series can efficiently atomize the smallest liquid volumes. Their size makes these valves ideal for use in tight spaces. The VarioSpray II system is also available as a food grade version, thereby complying with Directives EC 1935/2004 and FDA regulations.

Components and combination options

Individual valve

NOZZLE VALVE SERIES 166H

The stainless steel housing in combination with a solenoid valve offers the possibility to clock the spray application flexibly.

Applications:

- Cleaning
- Surface treatment
- Humidification
- Lubrication processes

Scope of supply:

- Nozzle valve with housing, retaining nut and a 5 m long plugged power cable
- Nozzle must be ordered separately

Series 166H

Material:

Housing: Stainless steel 316L
 Inner parts: Stainless steel 316L,
 stainless steel 304,
 stainless steel 434
 Gasket material: FKM
 (conforms to FDA)

Water flow rate:

Max. 1.7 gal/min at 75 psi

Max. operating pressure:

1,450 psi

Power:

8 W

Voltage:

24 V DC

Protection class:

IP 65

Max. switching frequency:

500/min at 75 psi

	Type	Nozzle size up to	Spray character	Spray angle/Material
	652	64x	Flat fan	Page 212
	684	608	Flat fan (tongue-type nozzle)	Page 217
	468	68x	Full cone spray	Page 174
	226	285	Hollow cone	Page 152

Your advantages

- Quick and simple nozzle assembly using a retaining nut guarantees an easy nozzle changeover
- Simple spray alignment
- Flexible design that allows the use of flat fan nozzles, hollow cone nozzles and full cone nozzles
- With integrated gasket for sealing between the nozzle and the valve

Ordering no.
166.000.1Y.H1.00.0

POSITIONABLE FLAT FAN NOZZLE FOR SERIES 166H AND VarioSpray HP

Properties:

- Outer geometry of the nozzle housing fluidically optimized for pulsed operation
- Positioning takes place via the attached dovetail
- Nozzle sizes and spray angles identical to standard nozzle series 652

Series 652.xxx.16.56

Type	Nozzle size up to	Spray character	Spray angle	Material
652.xxx.16.56	64x	Flat fan	Page 212	303 SS

Please refer to the data of series 652 on w for the nozzle size (flow rate and spray angle).

Ordering Type + Nozzle size = Ordering no.
example: 652.xxx.16.56 + 301 = 652.301.16.56

» TWISTLOC

Quick-change nozzle system

**Lechler TWISTLOC,
nozzle changing in less than no time.**
Save time and money with the quick-change nozzle system.

- **Quick:**
It takes just one twist to install or remove the nozzle.
- **Easy:**
Can be installed without tools – even in difficult-to-access locations and in bad lighting conditions.
- **Safe:**
Installation errors are avoided, as the nozzles are always set to the correct direction.
- **Max. pressure:**
15 bar.

System components		Ordering number							Inner Ø D [in]	Weight [lb]	
		Type	Mat. no.				Connection				
			1C	16	5E	7A	1/4 NPT	3/8 NPT			Welded connec- tion
Threaded nipple		092.102	●				BC		.31	.06	
		092.102	●				BE		.46	.06	
		092.102			●		BE		.31	.02	
Welded nipple		092.104	●					00	.46	.10	
Gasket for material 304 SS and 303 SS		092.113			●				–	.002	
Gasket for material PVDF		092.115			●				–	.002	
Gasket, incl. rubber gasket ring for use with non-return valves or strainers		092.116			●				–	.004	
Gasket, incl. rubber gasket ring for use with non-return valves or strainers, for PVDF material		092.114			●				–	.004	
Quick-release system For nozzle series 652/679		092.106	●	●					–	.04 (stainless steel)	
Quick-release system For nozzle series 226/468/684		092.108	●	●					–	.04 (stainless steel)	

Non-return valves, strainers
For installation in nipples with inner Ø 11.6 mm (see Page 306/307).

Ordering Type + Material no. + Code = Ordering no.
example: 092.102 + 16 + BC = 092.102.16.BC

STAMM®
SHOWER HEADERS

STAMM® SHOWER HEADERS with built-in cleaning device

Engineered and manufactured by Lechler Inc. in the USA under license by the STAMM® Company in Germany, these shower headers with built-in cleaning device are recognized worldwide as the original “brush and flush” shower system.

Shower pipe and nozzles remain clog-free due to the unique flush system design. A simple turn of the handwheel sweeps the contaminants away from the nozzle orifices and directs the debris down the flush-out valve.

Since these showers eliminate costly down time for cleaning, they are especially cost-effective in applications subject to high fluid contamination. Some features of the self-cleaning

shower system are:

- Header pipe available in sizes from 1 1/2" to 6" in diameter.
- Contaminants flushed via special valve, preventing them from clogging orifices or reaching showered surface.
- System accommodates wide range of flow rates.
- Highly efficient, interchangeable nozzles are self-aligning.
- Systems are tailored to your specific application.

Refer to the next page for a selection of nozzles specifically designed for use in STAMM® showers.

Typical applications:

- Cleaning of wires and felts
- Humidification
- Knock-off
- Lubrication

Standard shower models (Other configurations also available; note that models #7–10 have no cleaning device)

NOZZLES FOR STAMM® SHOWER HEADERS

Series 626 / 5SW

Designed specifically for STAMM® shower headers, these nozzles can serve as replacements or to change the flow rate of an existing unit. Self aligning when used with STAMM® or Lechler bases. 316L SS stainless steel construction for long service life. Available in 75°, 60°, 30°, and 15° flat fans or 0° solid stream ("needle jet") versions.

Applications:

- For use on STAMM® showers
- Paper production
- Belt filter press cleaning in wastewater treatment

Notes: Also available upon request are: (1) nozzles with other flow rates and (2) solid stream nozzles (0°) with a ruby tip orifice. The number in the Equiv. Orifice Diam. column represents the Nozzle # and spray angle stamped on each nozzle; e.g., the nozzle stamped 1.0 / 60 refers to 626.364.1F.37. Lechler has blank shower nozzles with no orifices which can be used on STAMM® showers when a particular nozzle opening needs to be blocked. The part number for this blank nozzle is **006.261.1F.00**.

AUTOMATIC CLEANING DEVICE AND OSCILLATORS FOR STAMM® HEADERS

Part number	Description	Stroke length	Shower size
<p>10.900 Automatic Cleaning Device</p> 	<p>Automatic regular cleaning of nozzles at programmable intervals; existing showers can be retrofitted with this device.</p>	<p>N/A</p>	<p>All sizes</p>
<p>10.200 E Oscillator</p> 	<p>Oscillator with electromechanical crank drive for side-to-side movement by a sliding block and axial guide rail.</p>	<p>Non-adjustable 200 mm</p>	
<p>10.010 LE-R Oscillator</p> 	<p>Oscillator with electromechanical gear motor that rotates a double ball screw spindle which converts rotation into linear stroke movement.</p>	<p>2" to 3": 206.4 mm or 301.4 mm 1-120 mm/min</p> <p>4" to 6": 203.2 mm or 304.2 mm</p>	<p>One size for 2" to 3" diameter</p> <p>One size for 4" to 6" diameter</p>
<p>10.020 EC Oscillator</p> 	<p>Oscillator with electromechanical step motor with a planetary gear reducer to drive a ball screw spindle.</p>	<p>Infinitely adjustable 1-200 mm 1-300 mm (optional)</p>	<p>2" to 6"</p>

AUTOMATIC CLEANING DEVICE AND OSCILLATORS FOR STAMM® HEADERS

Part number	Description	Stroke length	Shower size	
10.094 Oscillator		Infinitely adjustable 1–200 mm 1–300 mm (optional) 1–500 mm (optional)	2" to 6"	
10.093 Oscillator		Oscillator with oil-hydraulic drive with electronic oil flow control for automatic adjustment of stroke speed.	Infinitely adjustable 1–200 mm 1–300 mm (optional) 1–500 mm (optional)	2" to 6"
10.800 Oscillator bearing		Wear-resistant bearing made of stainless steel; installs in any position and fits all drive alternatives.	N/A
